**Entertainment Media and Politics** Robert Lance Holbert, 2016-03-17 The prominence of politically themed entertainment is evident across the global media landscape. Given its popularity, it is important to gain a firm understanding of the mechanisms through which this diverse and multi-faceted content can generate democratic outcomes. In addition, it is essential to isolate and predict properly the strength of a given effect and the conditions under which a specific outcome will become evident. The works contained in this edited volume explore affect and cognition-driven processes of influence, recognizing that humans are both emotional and rational beings. In addition, empirical evidence is offered to isolate and compare specific types of political entertainment media content, e.g., different types of satire and citizens' proclivities for this content, e.g., a person's Affinity for Political Humor, in order to best understand the complex means by which entertainment media can generate political influence. Attention is also paid to expanding what can and should be defined as political entertainment media, which includes opinion-based political talk programming. The collection and its authors represent a global perspective to reflect the rise of political entertainment media as a global phenomenon. This book was originally published as a special issue of *Mass Communication and Society*.

**Media, Children, and the Family** Dolf Zillmann, Jennings Bryant, Aletha C. Huston, 2013-11-05 This book brings together a group of scholars to share findings and insights on the effects of media on children and family. Their contributions reflect not only widely divergent political orientations and value systems but also three distinct domains of inquiry into human motivation and behavior: social scientific, psychodynamic, or psychoanalytical, and clinical practice. Each of these three domains is privy to important evidence and insights that need to transcend epistemological and methodological boundaries if understanding of the subject is to improve dramatically. In keeping with this notion, the editors asked the authors to go beyond a summary of findings and lend additional distinction to the book by applying the binoculars of their particular perspective and offering suggestions as to the implications of their findings. One of the goals of the conference that resulted in this book was consensus building in the area of media and family. From examining the findings and insights of a diverse group of scholars, it seems that consensus building in several areas is a distinct possibility. Addressing the concerns of educators about the influence of the mass media of communication, entertainment programs in particular on children and the welfare of the nuclear family, this volume projects directions for superior programming, especially for educational television. The influence of sex and violence on children and adults is given much attention, and the development of moral judgment and sexual expectations among other things is explored. The critical analysis of media effects includes examination of positive contributions of the media, such as the search for missing children and exemplary educational programs.
