Essential Fatty Acid Ratio Artemis P. Simopoulos, Leslie G. Cleland, 2003-01-01 Studies on the evolutionary aspects of diet and molecular studies included in this volume indicate that human beings evolved on a diet that was balanced in the essential fatty acids EFA In fact the ratio of omega 6 omega 3 EFA was 1:1 whereas present day diets in both developed and developing countries have a much higher ratio between 5:1 and 50:1 Additional studies show that a high ratio of omega 6 omega 3 EFA is detrimental to health and may lead to the development of chronic diseases Improving the dietary ratio by decreasing the omega 6 fatty acids and increasing the omega 3 fatty acids is essential for brain function and for the management of cardiovascular disease arthritis and cancer A ratio of 4:1 or less leads to lower dosage and to the reduction of adverse effects of drugs This volume should be of interest to a large and varied audience of researchers in academia industry and government cardiologists geneticists immunologists neuroscientists and cancer specialists as well as nutritionists dietitians food scientists agriculturists economists and regulators *Advances in Lipid Methodology* W.
