Foundations of Natural Resources Policy and Management Susan G. Clark, Tim W. Clark, Andrew R. Large-Scale Conservation in the Common Interest Susan G. Clark, Aaron M. Hohl, Catherine H. Picard, Elizabeth Thomas, 2014-09-03 Many people working toward sustainability recognize the important role of conservation but are inadequately prepared to deal with the large spatial temporal and complexity scales that are involved in large scale conservation efforts Problems in large scale conservation require navigating an intermixture of geophysical biological and political dimensions Coming to grips with these many natural and human forces and factors at large scales

much less the myriad details in any single case is challenging in the extreme and becomes more critical with each day that passes Large scale conservation poses many complex challenges that single disciplines approaches or methods cannot fully address alone Interdisciplinarity can significantly strengthen large scale conservation efforts Throughout Large Scale Conservation in the Common Interest the editors and authors argue that a more holistic and genuinely interdisciplinary approach is required to solve the complex and growing challenges associated with large scale conservation The chapters within offer such an approach and define key terms bring challenges to light and employ case studies to offer concrete practical and strategic recommendations to help those who are engaged in the interactive tasks of promoting sustainability and human dignity This book is intended for a broad audience including students and professors new to the field of large scale conservation experienced field based practitioners in science and management and decision and policy makers who set specific and strategic direction for large landscapes Professors can use this book to introduce students to the challenges of successful large scale conservation design and implementation and to teach interdisciplinarity as a framework concept and tool Professionals will find this book offers a new way of using science management and policy to make decisions Finally this volume can be used as a guide to set up workshops seminars or projects involving diverse people and perspectives

Bureaucratic Landscapes Craig W. Thomas,2002-12-20 Political scientists have long been concerned about the tension between institutional fragmentation and policy coordination in the U S bureaucracy The literature is rife with examples of agencies competing with each other or asserting their independence while cooperation is relatively rare This is of particular importance in policy areas such as biodiversity where species habitats and ecosystems cross various agency jurisdictions Bureaucratic Landscapes explores the reasons for the success and failure of interagency cooperation focusing on several case studies of efforts to preserve biodiversity in California The book examines why public officials tried to cooperate and the obstacles they faced providing indirect evidence of policy impacts as well Among other topics it examines the role of courts in prompting agency action the role of scientific knowledge in organizational learning and the emergence of new institutions to resolve collective action problems Notable findings include the crucial role of environmental lawsuits in prompting agency action and the surprisingly active role of the Bureau of Land Management in resource preservation
