 Mantle* John A. Goff, Klaus Holliger, 2012-12-06 Most of our knowledge about the physical structure and the chemical  
 composition of the Earth s deep interior is inferred from seismic data The interpretation of seismic waves generally follows  
 the assumption that the Earth s physical structure is grossly layered and that fluctuations of the physical parameters within  
 individual layers are smooth in structure and small in magnitude While this view greatly facilitates the analytic and  
 interpretative procedure it is clearly at odds with evidence from outcrops and boreholes which indicates that compositional  
 structural and petrophysical heterogeneity in the Earth prevails over a wide range of scales This book is the first to unify  
 three different views of crustal and upper mantle heterogeneity It brings together the geological view which is derived from  
 the analysis of crustal exposures and deep boreholes the stochastic view which attempts to find order and structure in these  
 seemingly chaotic data and the seismological view which considers the end product of the complex interaction of seismic  
 energy with the heterogeneous structure at depth John Goff and Klaus Holliger have compiled chapters that explore and  
 quantify the relationship between geological and petrophysical heterogeneity and its seismic response and use seismic data  
 to probe the fabric of the Earth s interior Geologists geostatisticians and geophysicists alike will benefit from the integrative  
 perspective presented in *Heterogeneity in the Crust and Upper Mantle* Nature Scaling and Seismic Properties making this  
 text an unparalleled reference for professionals and students in Earth science fields Way Home Josephine  
 Ensign, 2024-11-19 This is a work of narrative nonfiction set in Seattle King County Washington that explores the

contemporary landscape of homelessness with an emphasis on innovative local solutions      *Arc-Continent Collision* Dennis Brown, Paul D. Ryan, 2011-06-29 Arc continent collision has been one of the important tectonic processes in the formation of mountain belts throughout geological time and it continues to be so today along tectonically active plate boundaries such as those in the SW Pacific or the Caribbean Arc continent collision is thought to have been one of the most important process involved in the growth of the continental crust over geological time and may also play an important role in its recycling back into the mantle via subduction Understanding the geological processes that take place during arc continent collision is therefore of importance for our understanding of how collisional orogens evolve and how the continental crust grows or is destroyed Furthermore zones of arc continent collision are producers of much of the world's primary economic wealth in the form of minerals so understanding the processes that take place during these tectonic events is of importance in modeling how this mineral wealth is formed and preserved This book brings together seventeen papers that are dedicated to the investigation of the tectonic processes that take place during arc continent collision It is divided into four sections that deal firstly with the main players involved in any arc continent collision the continental margin the subduction zone and finally the volcanic arc and its mineral deposits The second section presents eight examples of arc continent collisions that range from being currently active through to Palaeoproterozoic in age The third section contains two papers one that deals with the obduction of large slab ophiolites and a second that presents a wide range of physical models of arc continent collision The fourth section brings everything that comes before together into a discussion of the processes of arc continent collision
