Laurance, Richard O. Bierregaard, 1997-06-21 We live in an

increasingly fragmented world with islands of natural habitat cast adrift in a sea of cleared burned logged polluted and otherwise altered lands Nowhere are fragmentation and its devastating effects more evident than in the tropical forests By the year 2000 more than half of these forests will have been cut causing increased soil erosion watershed destabilization climate degradation and extinction of as many as 600 000 species Tropical Forest Remnants provides the best information available to help us understand manage and conserve the remaining fragments Covering geographic areas from Southeast Asia and Australia to Madagascar and the New World this volume summarizes what is known about the ecology management restoration socioeconomics and conservation of fragmented forests Thirty three papers present results of recent research as well as updates from decades long projects in progress Two final chapters synthesize the state of research on tropical forest fragmentation and identify key priorities for future work

The Djief Hunters, 26,000 Years of Rainforest Exploitation on the Bird's Head of Papua, Indonesia Juliette M. Pasveer, 2004-07-01 Two prehistoric cave sites on the Bird s Head of western New Guinea provide a detailed narrative of 26 000 years of human occupation of this area During Late Pleistocene times lower temperatures allowed a suite of montane animal species to descend onto the lowland Ayamaru Plateau When the montane fauna receded during the subsequent climatic amel

Monteverde Nalini M. Nadkarni, Nathaniel T. Wheelwright, 2000-03-09 The Monteverde Cloud Forest Reserve has captured the worldwide attention of biologists conservationists and ecologists and has been the setting for extensive investigation over the past 30 years Roughly 40 000 ecotourists visit the Cloud Forest each year and it is often considered the archetypal high altitude rain forest This volume brings together some of the most prominent researchers of the region to provide a broad introduction to the biology of the Monteverde and cloud forests in general Collecting and synthesizing vital information about the ecosystem and its biota the book also examines the positive and negative effects of human activity on both the forest and the surrounding communities Ecologists tropical biologists and natural historians will find this volume an indispensable resource as will all those who are fascinated by the magnificent wonders of the tropical forests

Toucans, Barbets, and Honeyguides Lester Short, Jennifer F. M. Horne, 2001-11-08 This superbly illustrated book covers in unmatched detail the life history relationships biology and conservation of all the world s toucans barbets and honeyguides The colour plates painted by well known American artist Albert Earl Gilbert are probably the best paintings of these birds ever produced

**Floods of Fortune** Michael Goulding, Nigel J. H. Smith, Dennis J. Mahar, 1996 Enriched with nearly 100 beautiful color photographs Floods of Fortune offers the first holistic view of the conservation drama unfolding in the Amazonian floodplain

*Primates in Fragments* Laura K. Marsh, 2013-06-29 This volume was created initially from a symposium of the same name presented at the International Primatological Society s XVIII Congress in Adelaide South Australia 6 12 January 2000 Many of the authors who have contributed to this text could not attend the symposium so this has become another vehicle for the rapidly growing discipline of Fragmentation Science among primatologists Fragmentation has quickly become a field separate from general

ecology which underscores the severity of the situation since we as a planet are rapidly losing habitat of all types to human disturbance. Getting ecologists particularly primatologists to admit that they study in fragments is not easy. In the field of primatology one studies many things but rarely do those things genetics behavior population dynamics get called out as studies in fragmentation. For some reason fragmentation primatologists fear that our work is somehow not as good as those who study in continuous habitat. We worry that perhaps our subjects are not demonstrating as robust behaviors as they should given fragmented or disturbed habitat conditions. I had a colleague openly state that she did not work in fragmented forests that she merely studied behavior when it was clear that her study sites everyone of them was isolated habitat. Our desire to be just another link in the data chain for wild primates is so strong that it makes us deny what kinds of habitats we are working in. However

*Herbivory of Leaf-Cutting Ants* Rainer Wirth, Hubert Herz, Ronald J. Ryel, Wolfram Beyschlag, Bert Hölldobler, 2013-04-18 Plant animal interactions have become a focus of ecological research with the processes of herbivory being of special interest. This volume examines the interactions of leaf cutting ants with the rainforest vegetation on Barro Colorado Islands in Central America. It is the synthesis of field research on multiple scales extending over a period of several years. This work can serve as a model study summarizing and extending knowledge about herbivorous insect plant relationships and the resulting consequences on structural and functional features of tropical ecosystems. The text is an invaluable reference for researchers and land managers working in the fields of plant animal interactions herbivory community ecology and biodiversity

**New Perspectives on Nitrogen Cycling in the Temperate and Tropical Americas** Alan R. Townsend, 2012-12-06 Inputs of nitrogen to terrestrial and aquatic ecosystems have increased several fold over the last one hundred and fifty years with the steepest increases during the last four decades. The expansion of fertilizer manufacture and use the increase in fossil fuel combustion the intensification of animal husbandry and widespread cultivation of N<sub>2</sub> fixing crops have all contributed to the dramatic increase in N inputs. The increase has been most rapid in Northern Hemisphere NH temperate ecosystems but presently subtropical and tropical regions of Asia are also experiencing an explosive increase in N inputs to terrestrial ecosystems. W Chameides pers comm Galloway et al 1996 Projected increases in N deposition for these tropical and subtropical regions with a high natural background of N inputs exceed increases projected for temperate and arctic regions. Cleveland et al submitted Galloway et al 1994 Holland Lamarque 1997a Compared to biological N fixation N deposition is becoming a proportionately greater source of N to terrestrial and aquatic ecosystems worldwide. Vitousek et al 1997 6 The nitrogen contained in the atmosphere as N<sub>3</sub> 9 10 Tg Tg 2 12 10 g is the largest reservoir of N in the Earth system. Warneck 1988 However this paper focuses on the nitrogen emissions and deposition that have been transformed from N<sub>2</sub> into reactive forms that are biologically available e.g. Vitousek et al 1997

*Long-Term Studies of Vertebrate Communities* Martin L. Cody, Jeffrey A. Smallwood, 1996-10-24 This unique book synthesizes the ongoing long term community ecology studies of fish amphibians reptiles birds and mammals. The studies

have been conducted from deserts to rainforests as well as in terrestrial freshwater and marine habitats and provide valuable insight that can be obtained only through persistent diligent and year after year investigation Long Term Studies of Vertebrate Communities is ideal for faculty researchers graduate students and undergraduates in vertebrate biology ecology and evolutionary biology including ecology natural history and systematics Provides unique perspectives of community stability and variation Details the influence of natural and other perturbations on community structure Includes synopses by well known authors Presents results from a broad range of vertebrate taxa Studies were conducted at different latitudes and in different habitats

**Sustainable Soil Management** Deirdre Rooney, 2013-03-22 Changing land use practices and the role of soil biological diversity has been a major focus of soil science research over the past couple of decades a trend that is likely to continue The information presented in this book points to a holistic approach to soil management The first part looks at the land use effects on soil carbon storage and considers a range of factors including carbon sequestration in soils The second part of the book presents research investigating the interactions between soil properties plant species and the soil biota

**Frugivory and seed dispersal: ecological and evolutionary aspects** T.H. Fleming, Alejandro Estrada, 2012-12-06 Any scientific discipline needs a theoretical framework to guide its development and to sharpen the questions its researchers pursue In biology evolution is the grand theoretical framework and an historical perspective is necessary to understand present day biological conditions In its formative years the modern study of the fruit frugivore mutualism was guided by the specialist generalist paradigm developed by D Snow D McKey and H Howe Howe reviews the current status of this evolutionary paradigm and points out that it has been dismissed by many workers before being adequately tested This is because ecologists working with the tropical plants and frugivorous birds for which the paradigm was originally developed rarely measure the seed dispersal effectiveness of different disperser species He indicates that this paradigm still has heuristic value and suggests that several additional ecological paradigms including the concept of keystone species of plants and frugivores and the role that frugivores play in density dependent mortality in tropical trees are worth studying The concept of seed dispersal quality has been central to discussions of fruit frugivore coevolution Schupp thoroughly reviews data bearing on this concept constructs a hierarchical framework for viewing disperser effectiveness and points out that disperser effectiveness depends on both the quantity and quality of seed dispersal Effectiveness in turn affects both evolutionary and ecological relationships between dispersers and their food plants

**Global Warming and Biological Diversity** Robert L. Peters, Thomas E. Lovejoy, 1992-01-01 The biological effects of global warming should be of concern to all thinking individuals for warming could cause profound disruption of natural ecosystems and could threaten many species with extinction This important book the first to discuss in detail the consequences of global warming for ecosystems includes commentary by distinguished scientists on many aspects of this critical problem Experts describe responses of animals and plants to previous climate changes interactions between various environmental components

precipitation and soil chemistry for example and synergisms between climate change and human activities such as deforestation They consider many specific ecosystems including tropical forests the deciduous forests of eastern North America the forests of the Pacific Northwest Mediterranean type ecosystems in California arctic tundra and arctic marine systems Offering discussions that are both factual and speculative the volume points the way to future investigations of the implications of global warming

**Early Miocene Paleobiology in Patagonia** Sergio F. Vizcaíno, Richard F. Kay, M. Susana Bargo, 2012-10-11 Coastal exposures of the Santa Cruz Formation in southern Patagonia have been a fertile ground for recovery of Early Miocene vertebrates for more than 100 years This volume presents a comprehensive compilation of important mammalian groups which continue to thrive today It includes the most recent fossil finds as well as important new interpretations based on ten years of fieldwork by the authors A key focus is placed on the paleoclimate and paleoenvironment during the time of deposition in the Middle Miocene Climatic Optimum MMCO between twenty and fifteen million years ago The authors present the first reconstruction of what climatic conditions were like and present important new evidence of the geochronological age habits and community structures of fossil bird and mammal species Academic researchers and graduate students in paleontology paleobiology paleoecology stratigraphy climatology and geochronology will find this a valuable source of information about this fascinating geological formation
