Betty David Dawn, 2014-08-29 Betty is a story about my mother's life. She was a runaway in the 30s. She led her life following her emotions which got her into a lot of trouble for example choosing the wrong men and using the good men. Later in life she started controlling her emotions and thus led a better life for her self and her children. The Woman's Rights Act in the 30s to the 60s influenced her life. They fought for equality on the job and equality in the home. For example when the man of the house passed on the woman did not get the house or the money. The brother of the man got the house and the right to decide what the wife got and how much. Remember each new day gives a person another chance to continue their fight for changing to be the person who they really want to be.

Choosing and Using a Refracting Telescope Neil English, 2010-09-28 Choosing and Using a Refracting Telescope has been written for the many amateur astronomers who already own or are intending to purchase a refracting telescope perhaps to complement their existing arsenal of larger reflecting telescopes or for the

specialist who requires a particular refractor for serious astronomical applications or nature studies Four hundred year ago during the winter of 1609 a relatively unknown Italian scientist Galileo Galilei designed a spyglass with two crude lenses and turned it skyward Since then refractors have retained their dominance over all types of reflector in studies of the Moon planets and double stars because of the precision of their optics and lack of a central obstruction in the optical path which causes diffraction effects in all commercially made reflectors Most mature amateur astronomers got started with a 60mm refractor or something similar Thirty years ago there was little choice available to the hobbyist but in the last decade long focus crown flint achromats have moved aside for some exquisitely crafted apochromatic designs offered by leading commercial manufacturers There has been a huge increase in the popularity of these telescopes in the last few years led by a significant increase in the number of companies particularly William Optics Orion USA StellarVue SkyWatcher and AstroTech who are now heavily marketing refractors in the amateur astronomical magazines In Choosing and Using a Refracting Telescope well known observer and astronomy writer Neil English celebrates the remarkable history and evolution of the refracting telescope and looks in detail at the instruments their development and their use A major feature of this book is the way it compares not only different classes of refractor but also telescopes of each class that are sold by various commercial manufacturers The author is perhaps uniquely placed to do this having used and tested literally hundreds of different refracting telescopes over three decades Because it includes many diverse subjects such as imaging with consumer level digital cameras imaging with webcams and imaging with astronomical CCD cameras that are not covered together in equal depth in any other single volume Choosing and Using a Refracting Telescope could become the refractor bible for amateur astronomers at all levels especially those who are interested in imaging astronomical objects of every class **The**

Insurance Age ,1912 [Race Rights Reparations](#) Fernne Brennan,2017-07-14 This book considers institutional racism as a problem that exists within modern societies Its roots lie with the transatlantic slave trade and slavery and the solution involves ridding society of the problem It is argued here that first there needs to be an acceptance of its existence then developing the tools needed to deal with it and finally to implement those tools so that institutional racism can be permanently removed from society The book has four themes the first considers the nature of institutional racism the second theme looks at instances of institutional racism through matters such as deaths in custody and skin lightening the third considers the concept of reparations and the final area looks at the development of social movements as a way of pushing institutional racism up the political agenda The development of a social movement is part of a social discourse which would for example push mentoring as a form of reparations There is a need for more research on the manifestations of institutional racism and this book is part of that discourse It is argued that the legacy of the slave trade and slavery is continuing and contemporary through the presence of institutional racism in society This problem has not been addressed through legislation and policies devised to combat racial discrimination Institutional racism needs to be understood as being located

in the processes and procedures of societal institutions **Opera after 1900** Margaret Notley, 2017-07-05 The articles reprinted in this volume treat operas as opera and from some sort of critical angle none of the articles uses methodology appropriate for another kind of musical work Additional criteria used in selecting the articles were that they should not have been reprinted widely before and that taken together they should cover an extended array of significant operas and critical questions about them Trends in Anglophone scholarship on post 1900 opera then determined the structure of the volume The anthologized articles are organized according to the place of origin of the opera discussed in each of them the introduction however follows a thematic approach Themes considered in the introduction include questions of genre and reception perspectives on librettos and librettists words lyricism and roles of the orchestra and modernism and other political contexts

Driven Into Paradise Reinhold Brinkmann, Christoph Wolff, 1999-09-14 This is a long overdue and brilliant contribution to our understanding of the intellectual migration from Europe The essays in this volume illuminate in new ways the experiences of musicians and scholars who fled Europe Leon Botstein Music Director American Symphony Orchestra With a sweep and coherence very rare in essay collections this volume immediately takes its place as one of the most important publications on twentieth century music The range of source materials is dazzling anecdotes letters memoirs interviews newspaper articles musical scores films and archival documents Handled with deft scholarship they add up to a balanced yet deeply moving account of how figures of exile experienced and transformed American culture Walter Frisch author of *The Early Works of Arnold Schoenberg* *A Windfall of Musicians* Dorothy L. Crawford, 2009-06-23 This book is the first to examine the brilliant gathering of composers conductors and other musicians who fled Nazi Germany and arrived in the Los Angeles area Musicologist Dorothy Lamb Crawford looks closely at the lives creative work and influence of sixteen performers fourteen composers and one opera stage director who joined this immense migration beginning in the 1930s Some in this group were famous when they fled Europe others would gain recognition in the young musical culture of Los Angeles and still others struggled to establish themselves in an environment often resistant to musical innovation Emphasizing individual voices Crawford presents short portraits of Igor Stravinsky Arnold Schoenberg and the other musicians while also considering their influence as a group in the film industry in music institutions in and around Los Angeles and as teachers who trained the next generation The book reveals a uniquely vibrant era when Southern California became a hub of unprecedented musical talent *Exploring physics with computer animation and PhysGL* T J Bensky, 2016-11-01 This book shows how the web based PhysGL programming environment <http://physgl.org> can be used to teach and learn elementary mechanics physics using simple coding exercises The book's theme is that the lessons encountered in such a course can be used to generate physics based animations providing students with compelling and self made visuals to aid their learning Topics presented are parallel to those found in a traditional physics text making for straightforward integration into a typical lecture based physics course Users will appreciate the ease at which compelling

OpenGL based graphics and animations can be produced using PhysGL as well as its clean simple language constructs The author argues that coding should be a standard part of lower division STEM courses and provides many anecdotal experiences and observations that include observed benefits of the coding work
