#### **Fourth Symposium On Discrete Algorithms:**

Fourth IFIP International Conference on Theoretical Computer Science - TCS 2006 Gonzalo Navarro, Leopoldo Bertossi, Yoshiharu Kohayakawa, 2006-12-15 The papers contained in this volume were presented at the fourth edition of the IFIP International Conference on Theoretical Computer Science IFIP TCS held August 23-24, 2006 in Santiago, Chile. They were selected from 44 papers submitted from 17 countries in response to the call for papers. A total of 16 submissions were accepted as full papers yielding an acceptance rate of about 36%. Papers solicited for IFIP TCS 2006 were meant to constitute original contributions in two general areas: Algorithms, Complexity, and Models of Computation, and Logic, Semantics, Specification, and Verification. The conference also included six invited presentations: Marcelo Arenas, Pontificia Universidad Católica de Chile, Chile; Jozef Gruska, Masaryk University, Czech Republic; Claudio Gutierrez, Universidad de Chile, Chile; Marcos Kiwi, Universidad de Chile, Chile; Nicola Santoro, Carleton University, Canada; and Mihalis Yannakakis, Columbia University, USA. The abstracts of those presentations are included in this volume. In addition, Jozef Gruska and Nicola Santoro accepted our invitation to write full papers related to their talks. Those two surveys are included in the present volume as well. TCS is a biannual conference. The first edition was held in Sendai, Japan, 2000, followed by Montreal, Canada, 2002, and Toulouse, France, 2004.

Fourth South American Workshop on String Processing (WSP 1997) Ricardo Baeza-Yates, 1997-10-15 We use string processing to denote any use of computers to process and manage strings or sequences of symbols. This includes text retrieval, compression, computational biology, natural language processing, word theory, etc. Strings can also be extended to other dimensions including images and complex objects such as trees or graphs. These areas are important for many applications including text, image, or genetic databases. Nowadays, the most important motivation for research is searching and managing the World Wide Web. The Web contains terabytes of data and searching for information is becoming as difficult as finding a needle in a haystack. Future versions of this workshop will focus on generic information retrieval, query languages, user interfaces, and visualization tools. *Proceedings of the Fourth Annual ACM-SIAM Symposium on Discrete Algorithms*, 1993-01-01 Annotation: Proceedings of a conference that took place in Austin, Texas, in January 1993. Contributors are impressive names from the field of computer science, including Donald Knuth, author of several computer books of biblical importance. The diverse selection of paper topics includes dynamic point location, ray shooting, and the shortest paths in planar maps; optimistic sorting and information theoretic complexity; and an optimal randomized algorithm for the cow path problem.
