Tsang,J.A. Apps,2005-12-28 Chapters by a distinguished group of international authors on various aspects of Underground Injection Science and Technology are organized into seven sections addressing specific topics of interest In the first section the chapters focus on the history of deep underground injection as well regulatory issues future trends and risk analysis The next section contains ten chapters dealing with well testing and hydrologic modeling Section 3 consisting of five chapters addresses various aspects of the chemical processes affecting the fate of the waste in the subsurface environment Consideration is given here to reactions between the waste and the geologic medium and reactions that take place within the waste stream itself The remaining four sections deal with experience relating to injection of respectively liquid wastes liquid radioactive wastes in Russia slurried solids and compressed carbon dioxide Chapters in Section 4 cover a diverse range of other issues concerning the injection of liquid wastes including two that deal with induced seismicity In Section 5 Russian scientists have contributed several chapters revealing their knowledge and experience of the deep injection disposal of high level radioactive liquid processing waste Section 6 consists of five chapters that cover the technology surrounding the injection disposal of waste slurries Among the materials considered are drilling wastes bone meal and biosolids Finally four chapters in Section 7 deal with questions relating to carbon dioxide sequestration in deep sedimentary aquifers This subject is particularly topical as nations grapple with the problem of controlling the buildup of carbon dioxide in the atmosphere Comprehensive coverage of the state of the art in underground injection science and technology Emerging subsurface waste disposal technologies International scope State of the Art Report on Seismic Design Requirements for Nonstructural Building Components Long T. Phan,Andrew W. Taylor,1998-03 Seismic design requirements for nonstructural building components of five major building codes including the 1994 Uniform Bldg Code the 1994 Standard Bldg Code the 1994 NEHRP Recommended Provisions for Seismic Regulations for New Buildings the New Zealand Bldg Code and the Japanese Bldg Code were reviewed in this study Comparisons of codes reveal wide variation in seismic force and displacement requirements both in terms of levels of stringency and levels of details The difference in seismic force requirements between the most and least stringent codes can be more than five times Practical Lessons from the Loma Prieta Earthquake National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Geotechnical Board,1994-02-01 The Loma Prieta earthquake struck the San Francisco area on October 17 1989 causing 63 deaths and 10 billion worth of damage This book reviews existing research on the Loma Prieta quake and draws from it practical lessons that could be applied to other earthquake prone areas of the country The volume contains seven keynote papers presented at a symposium on the earthquake and includes an overview written by the committee offering

recommendations to improve seismic safety and earthquake awareness in parts of the country susceptible to earthquakes
