Interactive Mental Maths Peter Patilla,1999 Migration of the Acadian Orogen and Foreland Basin Across the Northern Appalachians of Maine and Adjacent Areas Dwight Culver Bradley,2000 The timing of Acadian orogenesis in Maine is reassessed on the basis of a new Silurian Devonian time scale new U Pb and 40Ar 39Ar ages of Acadian plutons new conodont and palynomorph ages of strata that constrain the age of deformation and published information This analysis shows that the Acadian deformation front migrated some 240 km present distance from southeast to northwest during a span of about 40 million years from Late Silurian to Middle Devonian time Distillation Sina Zerehschi,2012-03-23 Distillation modeling and several applications mostly in food processing field are discussed under three sections in the present book The provided modeling chapters aimed both the thermodynamic mathematical fundamentals and the simulation of distillation process The practical experiences and case studies involve mainly the food and beverage industry and odor and aroma extraction This book could certainly give the interested researchers in distillation field a useful insight *Quantitative Approaches to Microcirculation* Andreas Linninger,Kent-Andre Mardal,Paolo Zunino,2024-07-11 Microcirculation is a key area of interest within the realms of biology and medicine As a vital discipline microcirculatory biology forms a significant part of established medical fields like cardiovascular medicine and oncology and is increasingly relevant in emerging fields such as neuroscience With its multifaceted nature the study of microcirculation has evolved from basic observations and experiments to embrace cutting edge imaging technologies quantitative methods and the power of data science This volume brings together a series of insightful chapters that highlight the latest trends in modeling microcirculation It casts a spotlight on the vital role of microcirculation in brain function modeling and the innovative applications of microvascular models in oncology Readers will be introduced to state of the art methodologies of microcirculation modeling A key focus is on mixed dimensional models mathematical methods adept at describing complex interactions within lower dimensional manifolds Each chapter thoughtfully navigates the mathematical computational and practical challenges of these approaches underscoring their effectiveness in capturing the essence of microcirculation This book offers a window into the latest advancements and methodologies that are shaping the future of this vital field *Assess and Review* Ann Montague-Smith,2003 Assess and Review is a complete resource for assessing children s learning It provides a variety of activities for each key objective allowing teachers the flexibility to consolidate then review a child s progress Each teacher s book stands alone or works with any published core maths programme Each title includes mental and oral activities games and mental and written tests **Pick-me-up** ,1895 Magnetoelectric Composites Mirza I. Bichurin,2019-02-22 This book is dedicated to modeling and application of magnetoelectric ME effects in layered and bulk composites based on magnetostrictive and piezoelectric materials Currently numerous theoretical and experimental studies on ME composites are available but few on the development and research of instruments based on them So far only investigation of ME magnetic

field sensors has been cited in the existing literature However these studies have finally resulted in the creation of low frequency ME magnetic field sensors with parameters substantially exceeding the characteristics of Hall sensors The book presents the authors many years of experience gained in ME composites and through creation of device models based on their studies It describes low frequency ME devices such as current and position sensors and energy harvesters and microwave ME devices such as antennas attenuators filters gyrators and phase shifters

Chemical and Bioprocess Engineering Ricardo Simpson, Sudhir K. Sastry, 2013-12-04 The goal of this textbook is to provide first year engineering students with a firm grounding in the fundamentals of chemical and bioprocess engineering However instead of being a general overview of the two topics Fundamentals of Chemical and Bioprocess Engineering will identify and focus on specific areas in which attaining a solid competency is desired This strategy is the direct result of studies showing that broad based courses at the freshman level often leave students grappling with a lot of material which results in a low rate of retention Specifically strong emphasis will be placed on the topic of material balances with the intent that students exiting a course based upon this textbook will be significantly higher on Bloom s Taxonomy knowledge comprehension application analysis and synthesis evaluation creation relating to material balances In addition this book also provides students with a highly developed ability to analyze problems from the material balances perspective which leaves them with important skills for the future The textbook consists of numerous exercises and their solutions Problems are classified by their level of difficulty Each chapter has references and selected web pages to vividly illustrate each example In addition to engage students and increase their comprehension and rate of retention many examples involve real world situations
