France In The Age Of The Scientific Stat:

France in the Age of the Scientific State Robert G. Gilpin, 2015-12-08 Charles de Gaulle has often warned France and other European nations of the threat they face from advanced scientific and technological countries such as the United States and the Soviet Union Robert Gilpin examines this technological gap which France fears and the efforts France is making to introduce change and efficiency into her science administration He discusses the gap as it affects all of Europe and suggests that if western European nations are unable to form a common European administration of science policy and remain the main world importers of discoveries and exporters of brains they may become steadily weaker in international affairs Originally published in 1968 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Scientists and the State Etel Solingen, 1994 An important comparative study of scientists place in the twentieth century state Measurement and Statistics on Science and Technology Benoît Godin, 2004-08-02 How do we objectively measure scientific activities What proportion of economic activities should a society devote to research and development How can public sector and private sector research best be directed to achieve social goals Governments and researchers from industrial countries have been measuring science and technology for more than eighty years This book provides the first comprehensive account of the attempts to measure science and technology activities in Western countries and the successes and shortcomings of statistical systems Godin guides readers through the historical moments that led to the development of statistics on science and technology and also examines the socio political dynamics behind social measurement This enlightening account will be of interest to students and academics investigating science measurement as well as policy makers working in this burgeoning field

Routledge Library Editions: Political Protest Various, 2022-07-30 This 26 volume set is a wide ranging time and subject spanning examination of the phenomenon of political protest What drives people to take to the streets and how do their governments respond These questions and many more are analysed in areas as varied as sixteenth century German peasant uprisings revolutionary Russians at the Paris Commune women protesting nuclear weapons at Greenham Common and the role Christianity played in protests across the ages An impressive reference resource this set also looks at the policing of protests and official responses to them

A Social History of Knowledge II Peter Burke, 2012-01-17 This text argues that activities which appear to be timeless are in fact time bound and take different forms in different periods and places The book also tries to counter the tendency to write a

triumphalist history of the growth of knowledge by discussing losses of knowledge and the price of specialization

Defence and Dissent in Contemporary France Jolyon Howorth, Patricia Chilton, 2021-09-05 This book first published in 1984 examines France's independent nuclear weapons programme of the 1980s alongside the French peace movement which was almost totally absent in contrast to the peace protests of the US and the rest of Europe This book analyses this unusual pattern of defence and dissent and assesses its likely development It looks at the evolution of French post war defence policy and discusses the French peace movement attempting to explain why it was so weak The Retreat of the State Susan Strange, 1996-11-14

Adopting new and much more comprehensive concepts of both power and politics The Retreat of the State develops a theoretical framework to show who really governs the world economy It goes on to explore some of the non state authorities from mafias to the Big Six accounting firms and international bureaucrats whose power over who gets what in the world encroaches on that of national governments The book is a signpost pointing to some promising new directions for the future development of research and teaching in international political economy Its originality and scope make The Retreat of the State of great importance for scholars and students of international relations business and management **Foreign Policy and Interdependence in Gaullist France** Edward Morse, 2015-03-08

French foreign policy in the 1960s seemed unique because it was dominated by the anachronistic ideals of Charles de Gaulle Edward L Morse argues that in fact the foreign policies of all highly modernized states are so similar that they can be described and explained by a general theory of interdependence He uses France as a case study of his theory and shows that what makes French foreign policy in this period so fascinating is the way in which the behavior of the President brought into sharp focus the problems interdependence poses for nation states The book is divided into two parts The first develops the theory of the conduct of foreign policy in any highly modernized society The second part tests the theory by examining such characteristics of French foreign policy as the erosion of the distinction between foreign and domestic affairs the constraints put on foreign policy by the growth of international economic interdependence which has also affected the autonomy of decision making in a purely national context the increased importance of foreign economic policy the questioning of governmental priorities in foreign affairs and the emergence of crisis management and manipulation as part of the routine procedures of foreign policy operations Edward L Morse's work is valuable both for the theory it offers and because it gives a balanced view of foreign policy in an important period in recent French history Originally published in 1973 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 Doctors and the State David Wilsford, 1991 All advanced health care systems face severe difficulties in

financing the delivery of today's sophisticated medical care. In this study David Wilsford compares the health systems in France and the United States to demonstrate that some political systems are considerably more effective at controlling the cost of care than others. He argues that two variables, the autonomy of the state and the strength and cohesiveness of organized medicine, explain this variance. In France, Wilsford shows the state is strong in the health policy domain while organized medicine is weak and divided. Consequently, physicians exercise little influence over health care policymaking. By contrast, in the United States, the state is weak, the employers and insurers who pay for health care are fragmented, and organized medicine is strong and well-financed. As a result, medical professionals are able to exert a greater influence on policymaking, thus making cost control more difficult. Wilsford extends his comparison to health care systems in the United Kingdom, West Germany, Italy, Canada, and Japan. Whether the private or public sector finances health care, he discovers there is now an important trend in all of the advanced industrial countries toward controlling escalating costs by curbing both the medical profession's clinical autonomy and physicians' incomes.

The Origins of the Developmental State in Taiwan J. Megan Greene, 2008-04-30. The rapid growth of Taiwan's postwar miracle economy is most frequently credited to the leading role of the state in promoting economic development. Megan Greene challenges this standard interpretation in the first in-depth examination of the origins of Taiwan's developmental state. Greene examines the ways in which the Guomindang state planned and promoted scientific and technical development both in mainland China between 1927 and 1949 and on Taiwan after 1949. Using industrial science policy as a lens, she shows that the state, even during its most authoritarian periods, did not function as a monolithic entity. State planners were concerned with maximizing the use of Taiwan's limited resources for industrial development. Political leaders, on the other hand, were most concerned with the state's political survival. The developmental state emerged gradually as a result of the combined efforts of technocrats and outsiders, including academicians and foreign advisors. Only when the political leadership put its authority and weight behind the vision of these early planners did Taiwan's developmental state fully come into being. In Taiwan's combination of technocratic expertise and political authoritarianism, lie implications for our understanding of changes taking place in mainland China today.

The Colonial Origins of Modern Social Thought George Steinmetz, 2025-02-25. A new history of French social thought that connects postwar sociology to colonialism and empire. In this provocative and original retelling of the history of French social thought, George Steinmetz places the history and development of modern French sociology in the context of the French empire after World War II. Connecting the rise of all the social sciences with efforts by France and other imperial powers to consolidate control over their crisis-ridden colonies, Steinmetz argues that colonial research represented a crucial core of the nascent academic discipline of sociology, especially between the late 1930s and the 1960s. Sociologists who became favored partners of colonial governments were asked to apply their expertise to such social problems as detribalization, urbanization, poverty, and labor migration. This colonial orientation permeated all the major subfields of sociological research. Steinmetz

contends and is at the center of the work of four influential scholars Raymond Aron Jacques Berque Georges Balandier and Pierre Bourdieu In retelling this history Steinmetz develops and deploys a new methodological approach that combines attention to broadly contextual factors dynamics within the intellectual development of the social sciences and sociology in particular and close readings of sociological texts He moves gradually toward the postwar sociologists of colonialism and their writings beginning with the most macroscopic contexts which included the postwar reoccupation of the French empire and the turn to developmentalist policies and the resulting demand for new forms of social scientific expertise After exploring the colonial engagement of researchers in sociology and neighboring fields before and after 1945 he turns to detailed examinations of the work of Aron who created a sociology of empires Berque the leading historical sociologist of North Africa Balandier the founder of French Africanist sociology and Bourdieu whose renowned theoretical concepts were forged in war torn late colonial Algeria

Defeated Flesh Bertrand Taithe,1999 *Defeated Flesh* is a compelling study of the French defeat of 1870 and the socialist uprising of the Commune of Paris a crucial turning point in the making of modern France By examining the history of the body and medicine Taithe shows how the French mobilized for the war effort and how their ultimate defeat had devastating cultural and social consequences that led to the fin de si_cle spirit Reinterpreting the siege of Paris the physical suffering caused by the war and rationing in an exceptionally harsh period of French history the author challenges current debates on citizenship centralism and modern warfare TaitheOs original approach and the wide range of previously untouched source material he draws upon cast a new light on the social aspirations behind the worldOs first socialist uprising and on the fears of national decline so common in Western Europe before 1914 This intriguing and highly original study will be of interest to all readers of French history and of European and French culture as well as to specialists on the history of war and medicine

Beyond Spinoff John A. Alic,1992 In a rapidly changing world there needs to be a critical reappraisal of traditional military industry relationships This book packed with data industry specific case studies and sophisticated analysis is such an appraisal It will be required reading for technology managers and policymakers in industry and government as well as those concerned with technological and economic competitiveness

Capitalism and the State in Modern France Richard F. Kuisel,1983-04-29

The Politics of Grandeur Philip G. Cerny,1980-03-06 De Gaulle was the first major Western leader to pursue a foreign policy designed consistently to break the vicious circle of the Cold War and the straitjacket of the nuclear balance of terror between Russia and the United States At the same time he sought to establish in France a new set of institutions designed to break another vicious circle that of the divisive conflicts between French social groups and political parties which led to weak governments and an ineffective state This book studies the link between these two aims both by examining de Gaulle s political aims and style in a political and cultural context and by looking first at French policy towards the Atlantic alliance and then at the impact of de

Gaulle's foreign policy on domestic politics As a result many of the orthodox notions about de Gaulle are questioned **The Academic Research Enterprise within the Industrialized Nations** National Academy of Engineering, National Academy of Sciences, Institute of Medicine, Government-University-Industry Research Roundtable, 1990-02-01 This report identifies major global trends in scientific research describes the changes occurring within six industrialized countries in response to these trends and discusses the challenges facing these countries in the future At the symposium historians of science and higher education traced developments and described current conditions of research systems in new world countries represented by Japan Russia and the United States and in the old world represented by Germany France and Great Britain ISBN 0 309 04249 6 15 00 *The Power of the Space Club* Deganit Paikowsky, 2017-07-20 Why do nation states choose to develop national space programs How can they justify national efforts to acquire capabilities by arguing for membership of the space club This book provides a unique perspective of the past current and future of space exploration and technological development in world politics A country that sees itself as a power deserving of a seat at the table of world governance is expected to race for space Based on a rich and detailed analysis of a range of space programs of states which are not usually at the focus of world politics and its research the author shows that joining the space club is a legitimate and rational decision The book provides a different way of looking at international relations through a relatively under studied area of policy the space club *The Structure of the Defense Industry* Nicole Ball, Milton Leitenberg, 2021-05-30 Proponents of arms control and disarmament are often confronted with the argument that reductions in defense expenditure lead to cutbacks in military industries and thus to economic hardship While a reduction in defense production would cause some economic dislocation this would be mitigated by the ability of the economy to adapt to changing patterns of production This book first published in 1983 assesses the likely effects of reductions in defense industries by an examination of the roles these industries play in national economies Each chapter discusses industry employment output research and development capital value profitability concentration and competition internal organization and regional employment concentration Other questions considered include the economic importance of weapons exports the defense industry as a leading edge in maintaining national technological capabilities and the reliance of individual firms on defense contracting
