15 million inhabitants produce large quantities of waste in relatively small and confined areas. Much of the chemical products and waste products of modern society are released into the environment either during production, storage, transport, use, or ultimate disposal. These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems.

**Introduction to Green Chemistry** John Andraos, Albert S. Matlack, 2022-03-09. Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluorous biphasic catalysis, metal-organic frameworks, and process intensification, which were barely mentioned in the First Edition, have become major areas of research. In addition, government funding has ramped up the development of fuel cells and biofuels. This reflects the evolving focus from pollution remediation to pollution prevention. Copiously illustrated with more than 800 figures, the Third Edition provides an update from the frontiers of the field. It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter. Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry.

**NEW AND EXPANDED RESEARCH TOPICS** Metal-organic frameworks, Metrics, Solid acids for alkylation of isobutene by butanes, Carbon molecular sieves, Mixed micro and mesoporous solids, Organocatalysis, Process intensification and gas-phase enzymatic reactions, Hydrogen storage for fuel cells, Reactive distillation, Catalysts in action on an atomic scale.

**UPDATED AND EXPANDED CURRENT EVENTS TOPICS** Industry resistance to inherently safer chemistry, Nuclear power, Removal of mercury from vaccines, Removal of mercury and lead from primary explosives, Biofuels, Uses for surplus glycerol, New hard materials to reduce wear, Electronic waste, Smart growth. The book covers traditional green chemistry topics including catalysis, benign solvents, and alternative feedstocks. It also discusses relevant but less frequently covered topics with chapters such as *Chemistry of Long Wear and Population and the Environment*. This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society.
