Handbook of Biological Control T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control

This book covers the distribution of these species across the Palearctic region and their widespread global benefits as natural biocontrol agents. Each chapter covers a braconid subfamily providing introductory information on its biology and phylogeny, total number of species, global distribution, and how they can be used to control pests and invasive insect species. In addition, this book discusses the importance of integrated pest management, specifically how Braconidae can be used for one time or repeated introduction to natural enemies in suppressing pest populations. Finally, each chapter offers an illustrative key for readers to visualize and identify each species. Offers braconid taxonomy, biology, phylogeny, and host parasitoid relationships. Provides illustrated identification keys to visualize and identify each species. Includes global distribution of braconids in other regions. Discusses braconid benefits as natural biocontrol agents. **Instant Insights: Mite pests in agriculture** Prof Oscar E. Liburd, Dr Lorena Lopez, Dr Daniel Carrillo, Dr Alexandra M. Revynthi, Dr Omotola Olaniyi, Dr Rana Akyazi, Dr Rebecca A. Schmidt-Jeffris, Dr Elizabeth H. Beers, Dr Carlo Duso, R. Srinivasan, Marion O. Harris, Kirk Anderson, M El-Bouhssini, Frank Peairs, Professor Gary L. Hein, Steven Xu, 2021-04-06 This collection features four peer reviewed literature reviews on mite pests in agriculture. The first chapter offers a holistic approach to integrated mite management by reviewing the basics of mite taxonomy and morphology. It studies the key plant mite families focussing on major plant feeding mites Tetranychidae, Tarsonemidae, Eriophyoidea, as well as the natural predators that regulate these mite populations. The second chapter explores the cultural, biological, and chemical control tactics available for controlling major plant feeding mites. These tactics include choosing tolerant varieties and weed management. The chapter concludes with a discussion on the debate surrounding the best form of control for mite pests in agriculture. The third chapter highlights the importance of understanding the bio ecology of Tetranychidae species affecting tomato crops, including the two spotted spider mite, carmine spider mite, and red spider mite. The chapter considers the effects of each pest on tomato plants as well as how best to control them. The final chapter details the ecology of mite pests affecting wheat that belong to the Eriophyoidea family, such as gall mites and wheat curl mites. The chapter discusses the various forms of control for managing Eriophyid mites, as well as the development of new resistant varieties of wheat. **Precision Agriculture Basics** D.
