Minds behind the Brain Stanley Finger,2000-03-02 Attractively illustrated with over a hundred halftones and drawings this volume presents a series of vibrant profiles that trace the evolution of our knowledge about the brain Beginning almost 5000 years ago with the ancient Egyptian study of the marrow of the skull Stanley Finger takes us on a fascinating journey from the classical world of Hippocrates to the time of Descartes and the era of Broca and Ramon y Cajal to modern researchers such as Sperry Here is a truly remarkable cast of characters We meet Galen a man of titanic ego and abrasive

disposition whose teachings dominated medicine for a thousand years Vesalius a contemporary of Copernicus who pushed our understanding of human anatomy to new heights Otto Loewi pioneer in neurotransmitters who gave the Nazis his Nobel prize money and fled Austria for England and Rita Levi Montalcini discoverer of nerve growth factor who in war torn Italy was forced to do her research in her bedroom For each individual Finger examines the philosophy the tools the books and the ideas that brought new insights Finger also looks at broader topics how dependent are researchers on the work of others What makes the time ripe for discovery And what role does chance or serendipity play And he includes many fascinating background figures as well from Leonardo da Vinci and Emanuel Swedenborg to Karl August Weinhold who claimed to have reanimated a dead cat by filling its skull with silver and zinc and Mary Shelley whose Frankenstein was inspired by such experiments Wide ranging in scope imbued with an infectious spirit of adventure here are vivid portraits of giants in the field of neuroscience remarkable individuals who found new ways to think about the machinery of the mind Neuronal Death Gregory R. Bock, Maeve O'Connor, 2008-04-30 Parkinson's disease Alzheimer's disease and motor neuron disease share a significant common feature selective death of neurons in restricted regions of the brain This international symposium held by the Ciba Foundation in 1986 is the first to bring together neurophysiologists working on neuronal death and neuropathologists dealing with human degenerative brain disease Participants describe the causes and sequence of events leading to neuronal death and discuss what can be done to prevent it Among the topics covered are recent advances in the understanding of agents such as trophic factors excitotoxins and poisons that are known to be involved in neuronal death examples of neuronal death during normal development and the role played by endocrine mechanisms and neuronal activity Also considers trophic factors controlling the survival of neuronal transplants and the therapeutic prospects for tissue transplantation The Inherited Ataxias Reed Neurological Research Center, 1978 Environmental Factors in Neurodevelopmental and Neurodegenerative Disorders Michael Aschner, Lucio G. Costa, 2015-06-18 Environmental Factors in Neurodevelopmental and Neurodegenerative Disorders presents a state of the art review of the effects of environmental contaminants on the development and degeneration of the human nervous system brought together by world leading experts in the field Part One describes the adverse effects that the environment can have on neurological development and how these effects may exhibit Specific contaminants and their possible consequences of exposure are addressed lead methylmercury alcohol as well as specific disorders and the environmental factors associated with them such as the effect of diet on attention deficit and hyperactivity disorders Part Two tackles neurodegenerative disorders specifically addressing their potential neurotoxic origins and discussing the increasing interest in the effects that early exposure may have in later life Environmental Factors in Neurodevelopmental and Neurodegenerative Disorders is an invaluable reference for those professionals working in the fields of toxicology environmental health and neuroscience Provides for the first time the cutting edge theory of environmental impacts on both neurodegenerative and neurodevelopmental disorders Written by an

international selection of the world's foremost experts in the field of neurotoxicology Full colour throughout providing accurate and illustrative examples of neurotoxic effects in action An invaluable reference for those professionals working in the fields of toxicology environmental health and neuroscience Bibliography of Amyotrophic Lateral Sclerosis and Parkinsonism-dementia of Guam Ralph M. Lishman's Organic Psychiatry Daniel David, Simon Fleminger, Michael Kopelman, Simon Lovestone, John Mellers, 2011-08-24 For three decades psychiatrists have turned to Lishman's Organic Psychiatry as the standard neuropsychiatry reference. It stood as the last great single author reference text in medicine a combination of meticulous exhaustive research conveyed in a beautifully clear style. Now the mantle has been passed to a group of five distinguished authors and it is to their considerable credit that the attributes which made Organic Psychiatry such a distinctive voice remain. The fourth Edition of Lishman's Organic Psychiatry is a rich blend of detailed clinical inquiry and up to date neuroscience. It should be on every psychiatrist's book shelf Anthony Feinstein MPhil PhD FRCP Professor Department of

Psychiatry University of Toronto Canada Over the past 30 years thousands of physicians have depended on Lishman s Organic Psychiatry Its authoritative and reliable clinical guidance was and still is beyond compare The new edition of this classic textbook has now been extensively revised by a team of five authors yet it follows the tradition of the original single authored book It continues to provide a comprehensive review of the cognitive emotional and behavioural consequences of cerebral disorders and their manifestations in clinical practice Enabling clinicians to formulate incisive diagnoses and appropriate treatment strategies Lishman's Organic Psychiatry is an invaluable source of information for practising psychiatrists neurologists and trainees This new edition covers recent theoretical and clinical developments with expanded sections on neuropsychology and neuroimaging includes a new chapter on sleep disorders whilst the chapters on Alzheimer s disease and related dementias Epilepsy Movement disorders and Traumatic brain injury have been extensively revised reflecting the greatly improved understanding of their underlying pathophysiologies showcases the huge advances in brain imaging and important discoveries in the fields of molecular biology and molecular genetics has been enhanced with the inclusion of more tables and illustrations to aid clinical assessment incorporates important diagnostic tools such as magnetic Greenfield's Neuropathology, 2-Volume Set, Eighth Edition Seth Love, David Louis, David W resonance brain images Ellison, 2008-02-29 Greenfield's Neuropathology the worlds leading neuropathology reference provides an authoritative comprehensive account of the pathological findings in neurological disease their biological basis and their clinical manifestations This account is underpinned throughout by a clear description of the molecular and cellular processes and reactions that are relevant to the development and normal and abnormal functioning of the nervous system While this scientific content is of paramount importance however care has been taken to ensure that the information is presented in a way that is accessible to readers working within a range of disciplines in the clinical neurosciences and that also places the neuropathological findings within the context of a broader diagnostic process. The new eighth edition incorporates much new information new illustrations and many new authors while retaining the depth breadth and quality of content so praised in previous editions Each chapter opens with an introductory section designed to offer an integrated approach to diagnosis taking account of clinical manifestations neuroradiological and laboratory findings as well as the neuropathological and molecular genetic features of the diseases being considered Strong emphasis has been placed on facilitating the retrieval of neuropathological information by non neuropathologists grapping with differential diagnoses or seeking information on broad categories of neurological disease and boxes and tables are used to present important symptoms and signs patterns of disease and other features for ease of reference High quality line and photographic illustrations the majority in full colour are all available on a companion CD to complete the offering Neuropathology of Neurodegenerative Diseases Book and Online Gabor G.
