*Substance Abuse And The New Road To Recovery* Glenn D. Walters,2014-06-03 Substance misuse is one of the more common yet baffling problems confronting the practising mental health professional today The issues involved in the misuse of substances can be so complex that some practitioners are inclined to avoid working with clients who have been diagnosed with a drug abuse problem This new guidebook is designed to assist clinicians with the task of conceptualizing understanding and intervening with persons who abuse substances It accomplishes this by offering practical suggestions assessment procedures and change strategies directed at the thoughts feelings and behaviours believed to support a drug lifestyle Although the approach described in this book utilizes a number of cognitive behavioural techniques the approach is unique in the sense that it also deals with the fear of change that frequently interferes with a client s ability to benefit from therapy It also considers change strategies used by people who have escaped from a drug lifestyle without any type of treatment or formal intervention Momentarily arresting the lifestyle is the first step of intervention This is followed by skill development in which the conditions choices and cognitions associated with a drug lifestyle are targeted for intervention and change In the final phase of this approach the client is engaged in the resocialization process whereby he or she is encouraged to develop ways of thinking and behaving that are incompatible with continued misuse of psychoactive substances The end result is a concise yet comprehensive examination of ways clinicians might facilitate change in persons previously committed to a drug lifestyle      **Chemical Dependency and Compulsive Behaviors** Richard W. Esterly,William T. Neely,2013-06-17 There is a tremendous concern and interest in the number of chemical dependents with co existing compulsive behaviors However no

one has developed a theory that can explain the high prevalence of compulsive behaviors in chemical dependents and more importantly describe the treatment and recovery implications The literature and professionals are divided with the counselors clinicians on one side and the researchers on the other The authors try to bridge this obvious gap by writing a book that can bring recent genetic biochemical research to the counselor clinician in a way that will help them diagnose and treat their patients This book is the result of the authors long interest in and study of chemical dependency and compulsive behaviors It begins with the observation that chemical dependents experience a much higher prevalence of compulsive behaviors than the general population Although many have written about the two subjects generally the relationship of a single compulsive behavior to chemical dependency none have developed a theory with supporting research that ties the type of chemical dependency to specific compulsive behaviors The authors describe recent research that connects chemical dependency and compulsive behaviors to the underlying genetic biochemical mechanisms and provide detailed examinations of the clinical implications of the model as well as case histories
