C Cells presents a critical review of studies on the purification of Alpha and Beta thyrocalcitonin. The book discusses the histopathological investigation on C cells as well as the nature of parafollicular cells. Some of the topics covered in the text are the pharmacologic and toxicological effects of porcine thyrocalcitonin in animals, the observation of the effect of thyroidectomy in patients with high thyrocalcitonin secretion and the definition of chronic calcitonin deficiency. The radiological and histological bone changes produced by calcitonin, calcitonin as an ultimobranchial hormone and the effects of calcium intake levels on the response to exogenous rat are also covered. The book further tackles bone culture studies with thyrocalcitonin, the observation made on the dense granules in bat thyroid parafollicular cells and the study of the bovine parturient paresis and hypocalcemia. A chapter is devoted to the inhibition of thyrocalcitonin bone resorption in tissue culture. Another section focuses on the methods for secretory granules staining. The book can provide useful information to scientists, immunologists, students and researchers. Cannabinoids and the Brain Linda A. Parker, 2018-09-25 A review of the scientific evidence on the effects of cannabinoids on brain and behavioral functioning with an emphasis on potential therapeutic use. The cannabis plant has been used for recreational and medicinal purposes for more than 4 000 years but the scientific investigation into its effects has only recently yielded useful results. In this book Linda Parker offers a review of the scientific evidence on the effects of cannabinoids on brain and behavioral functioning with an emphasis on potential therapeutic uses. Parker describes the discovery of tetrahydrocannabinol (THC), the main psychoactive component of cannabis, and the further discovery of cannabinoid receptors in the brain. She explains that the brain produces chemicals similar to THC which act on the same receptors as THC and shows that the endocannabinoid system is involved in all aspects of brain functioning. Parker reports that cannabis contains not only the psychoactive compound THC but also other compounds of potential therapeutic benefit and that one of them, cannabidiol (CBD), shows promise for the treatment of pain, anxiety and epilepsy. Parker reviews the evidence on cannabinoids and anxiety, depression, mood, sleep, schizophrenia, learning and memory, addiction, sex, appetite and obesity, chemotherapy-induced nausea, epilepsy and such neurodegenerative disorders as multiple sclerosis and Alzheimer's Disease. Each chapter also links the scientific evidence to historical and anecdotal reports of the medicinal use of cannabis. As debate about the medical use of marijuana continues, Parker's balanced and objective review of the fundamental science and potential therapeutic effects of cannabis is especially timely. **Acetylcholine** M. J. Michelson, E. V. Zeimal, 2014-05-17

Acetylcholine: An Approach to the Molecular Mechanism of Action is an in-depth study of the neurotransmitter system with much focus on acetylcholine and its action and the cholinergic synapse. The book, divided into seven chapters, covers the following topics: the function of the cholinergic synapse, the movement of ions across membranes, the excitatory postsynaptic potential, the nature of cholinergic receptors and cholinesterases, the structure of its active centers and the pattern of arrangement of the

receptors of the cholinergic membrane The book also covers the quantitative evaluation of the action of neurotransmitters the reactive capacity of the acetylcholine molecule and its effects on nerve endings and nerve fibers and the release of mediators and hormones The text is recommended for those who specialize in the fields of biology medicine biochemistry and pharmacology especially those wish to study about the neurotransmitter system cholinergic receptors the cholinergic synapse the acetylcholine and its action
