

HANDBOOK OF ARCHITECTURAL DETAILS FOR COMMERCIAL BUILDINGS

JOSEPH DeCHIARA

This handbook collects in one volume reproductions of actual working drawings obtained from architectural offices across the United States. Given the nature of the original illustrations, the quality of the reproductions seems somewhat but this does not detract from the value of this compilation—the best of its kind ever made.

Chemical Analysis Alphonse Normandy, Henry Minchin Noad, 1875 Development of Thermal Envelope Design Guidelines
for Federal Office Buildings Andrew K. Persily, 1990 Office building envelopes are generally successful in meeting a range of
 structural aesthetic and thermal requirements However poor thermal envelope performance will occur when there are
 discontinuities in the envelope insulation and air barrier systems such as thermal bridges and air leakage sites These
 discontinuities result from designs that do not adequately account for heat air and moisture transmission with many thermal
 defects being associated with inappropriate or inadequate detailing of the connections of envelope components Despite the
 existence of these thermal envelope performance problems information is available to design and construct envelopes that do
 perform well In order to close the gap between available knowledge and current practice the Public Buildings Service of the
 General Services Administration has entered into an interagency agreement with the Center for Building Technology of the

National Institute of Standards and Technology to develop thermal envelope design guidelines for federal office buildings The goal of this project is to transfer the knowledge on thermal envelope design and performance from the building research design and construction communities into a form that will be used by building design professionals This report describes the NIST GSA envelope design guidelines development at the end of the first year of effort on the project The effort to this point has consisted of a literature review of research results and technical information on thermal envelope performance and design an assessment of existing design guidelines as they relate to the thermal envelope and the development of a format and outline for the design guidelines
