Handbook of Child Psychopathology Thomas H. Ollendick, 2012-09-10 In our first edition of the Handbook in 1983 we noted that child psychopathology should no longer be viewed simply as a downward extension of adult psychopathology Rather we suggested that children must be viewed as children not as miniature adults and that a merger of clinical child psychology and developmental psychology must occur in order for this objective to be realized Now 6 years later we are sufficiently encouraged to assert that this synthesis at least on a conceptual level is well under way Yet much growth remains to be seen along practical lines The real test of the synthesis of these two fields of study will be evidenced on the battlefield that is the front line of clinical practice Just how integrated clinical child psychology and developmental psychology really are remains to be seen Nonetheless progress is well under way Careful attention to developmental and other contextual issues guided us in our efforts to solicit contributors for this second edition All the contributors are active researchers and clinicians in the area of child psychopathology and all are keenly aware of the subtle nuances and special considerations of clinical and developmental psychology as they relate to child behavior problems In

addition all the contributors are empirically minded as a result the chapters are data based and represent some of the most up to date knowledge currently available However as research based knowledge is more abundant and conclusive in some topic areas than in others the chapters vary in length and scope

Handbook of Research in Pediatric and Clinical Child Psychology Dennis Drotar, 2013-11-11 The professional development of researchers is critical for the future development of the fields of pediatric and clinical child psychology In order to conduct research in pediatric and clinical child psychology researchers need to work with a wide range of populations and master an increasingly wide range of skills many of which are either not formally taught or considered in sufficient depth in clinical training Such skills include the development of resources for research by writing grants to government agencies and foundations skills in preparing research for publications concerning original research review articles or case reports scientific presentation skills the ability to review and edit scientific manuscripts and to implement and manage research in applied settings Moreover the increasing complexity of research in pediatric and clinical child psychology requires successful researchers in these fields to develop their expertise with a wide range of new specialized methodologies data analytic methods models of data analysis and methods of assessment Finally to enhance the relevance of their research to practice researchers in pediatric and clinical child psychology need to integrate their work with clinical service delivery programs that are based on empirical research The necessity to train researchers in pediatric and clinical child psychology in such multifaceted knowledge and skills places extraordinary burdens on professional

training programs Professional researchers in pediatric and child clinical psychology also are challenged to develop new knowledge and skills through continuing education and faculty development programs
