Remediation Manual for Petroleum Contaminated Sites David L. Russell,1992-11-23 Based on proven investigation into cleanup techniques the material in this manual gives engineers a working knowledge of the field and a basis for making key decisions during the cleanup process It is easy to get petroleum into the ground but hard to get it back out again The problem does not exist in the groundwater or the soil alone but in a dynamic balance between the soil water and air in the soil Gasoline and any of its volatile components can and do move between the soil air and water and they cost billions of dollars every year in contamination cleanup This new book provides the information needed for cost and time effective petroleum contaminated site cleanup Originally developed as an oil company s training aid this book discusses the hows and whys of site cleanup geology data gathering cleanup alternatives remediation costs and manage ment of consultants contractors Plus the book contains a criti cal examination of the benefits and limitations of each type of remediation technology There is never only one way to clean up a particular site The choice of the method of cleanup is one of the greatest factors affecting the cost Another important cost factor is the level of cleanup required to satisfy the regulatory cleanup community This new book will not only provide a fundamental under standing of site remediation techniques but also the knowledge to make cost effective environmentally sound choices during the remediation process Copies of this handy manual are available for immediate delivery An order form follows the detailed table of contents on the reverse

Russell, 2024-08-26 Based on the author's more than 40 years of experience working on environmental projects Remediation Manual for Contaminated Sites provides a practical guide to environmental remediation and cleanups It presents a broad overview of the environmental remediation process distilled into what one needs to know to evaluate a specific challenge or solve a remediation problem The text offers guidance on tasks that range from managing consultants and contractors to gathering data selecting a suitable remediation technology and calculating remediation costs This new edition is updated throughout includes five new chapters and provides a more global coverage This book includes remediation strategies for a variety of contaminants and examines a wide range of technologies for the remediation of water and soil including excavation wells drainage soil venting vapor stripping incineration bioremediation containment solidification vitrification and phytoremediation Written as a down to earth reference for professionals faced with the challenges of remediating a contaminated site this book is also useful as a primer for students and those new to the field It includes numerous figures photographs tables and helpful checklists This new edition adds five all new chapters It presents a more global approach and practical examples from around the world Field Screening Europe Johannes Gottlieb, Heinz Hötzl, Karin Huck, Reinhard Niessner, 2012-12-06 These Proceedings contain both oral and poster contributions to the first international conference Field Screening Europe Strategies and Techniques for On Site Investigation and Monitoring of Contaminated Soil Water and Air held in Karls ruhe September 29 October 1 1997 Environmental monitoring and the assessment of chemical contaminations are be coming more and more important The integrated study of environmental con tamination in the field is a rather recent

approach Field screening indicates such field analytical tools guick methods and strategies for on site or in situ environmental analysis and assessment of contamination The classical strategy for investigating contaminants consists of the following steps site studies sampling sample transport to the laboratory sample preparation and analysis This strategy is rather expensive and time consuming Some investigations including sample preparation may last several days In many cases the results must be available immediately and are of importance for further decisions Field screening is an alternative or complement to this strategy that attempts to be cheaper and faster and may achieve the same quality of results The most important argument for field analytical methods is that the superior accuracy and high costs of laboratory methods are disproportional to the possibility of artifacts from sampling and errors originating from spatial variations of contaminants
