Handbook of Paleoanthropology Winfried Henke, Ian Tattersall, 2007-05-10 This 3 volume handbook brings together contributions by the world's leading specialists that reflect the broad spectrum of modern palaeoanthropology thus presenting an indispensable resource for professionals and students alike Vol 1 reviews principles methods and approaches recounting recent advances and state of the art knowledge in phylogenetic analysis palaeoecology and evolutionary theory and philosophy Vol 2 examines primate origins evolution behaviour and adaptive variety emphasizing integration of fossil data with contemporary knowledge of the behaviour and ecology of living primates in natural environments Vol 3 deals with fossil and molecular evidence for the evolution of Homo sapiens and its fossil relatives **In the Light of Evolution**

National Academy of Sciences, 2010-11-30 The Human Condition is a collection of papers by leading evolutionary biologists and philosophers of science that reflect on the Darwinian Revolution as it relates to the human condition at levels ranging from the molecular to the theological The book focuses on understanding the evolutionary origin of humans and their biological and cultural traits The Human Condition is organized into three parts Human Phylogenetic History and the Paleontological Record Structure and Function of the Human Genome and Cultural Evolution and the Uniqueness of Being Human This fourth volume from the In the Light of Evolution ILE series based on a series of Arthur M Sackler colloquia was designed to promote the evolutionary sciences Each volume explores evolutionary perspectives on a particular biological

topic that is scientifically intriguing but also has special relevance to contemporary societal issues or challenges Individually and collectively the ILE series interprets phenomena in various areas of biology through the lens of evolution addresses some of the most intellectually engaging as well as pragmatically important societal issues of our times and fosters a greater appreciation of evolutionary biology as a consolidating foundation for the life sciences **Lone Survivors** Chris

Stringer,2012-03-13 A top researcher proposes a controversial new theory of human evolution in a book combining the thrill of a novel with a remarkable depth of perspective Nature In this groundbreaking and engaging work of science world renowned paleoanthropologist Chris Stringer sets out a new theory of humanity s origin challenging both the multiregionalists who hold that modern humans developed from ancient ancestors in different parts of the world and his own out of Africa theory which maintains that humans emerged rapidly in one small part of Africa and then spread to replace all other humans within and outside the continent Stringer s new theory based on archeological and genetic evidence holds that distinct humans coexisted and competed across the African continent exchanging genes tools and behavioral strategies Stringer draws on analyses of old and new fossils from around the world DNA studies of Neanderthals using the full genome map and other species and recent archeological digs to unveil his new theory He shows how the most sensational recent fossil findings fit with his model and he questions previous concepts including his own of modernity and how it evolved With photographs included Lone Survivors will be the definitive account of who and what we were and will change perceptions about our origins and about what it means to be human An essential book for anyone interested in psychology sociology anthropology human evolution or the scientific process Library Journal Highlights just how many tantalizing discoveries and analytical advances have enriched the field in recent years Literary Review Human Biogeography Alexander

Harcourt,2012-05-02 In this innovative wide ranging synthesis of anthropology and biogeography Alexander Harcourt tells how and why our species came to be distributed around the world He explains our current understanding of human origins tells how climate determined our spread and describes the barriers that delayed and directed migrating peoples He explores the rich and complex ways in which our anatomy physiology cultural diversity and population density vary from region to region in the areas we inhabit The book closes with chapters on how human cultures have affected each other s geographic distributions how non human species have influenced human distribution and how humans have reduced the ranges of many other species while increasing the ranges of others Throughout Harcourt compares what we understand of human biogeography to non human primate biogeography *Chimpanzees and Human Evolution* Martin N. Muller,Richard W.

Wrangham,David R. Pilbeam,2017-11-27 Knowledge of wild chimpanzees has expanded dramatically This volume edited by Martin Muller Richard Wrangham and David Pilbeam brings together scientists who are leading a revolution to discover and explain human uniqueness by studying our closest living relatives Their conclusions may transform our understanding of human evolution *Pathways to Power* T. Douglas Price,Gary M. Feinman,2010-08-20 There are few questions more central

to understanding the prehistory of our species than those regarding the institutionalization of social inequality Social inequality is manifested in unequal access to goods information decision making and power This structure is essential to higher orders of social organization and basic to the operation of more complex societies An understanding of the transformation from relatively egalitarian societies to a hierarchical organization and socioeconomic stratification is fundamental to our knowledge about the human condition In a follow up to their 1995 book Foundations of Social Inequality the Editors of this volume have compiled a new and comprehensive group of studies concerning these central questions When and where does hierarchy appear in human society and how does it operate With numerous case studies from the Old and New World spanning foraging societies to agricultural groups and complex states Pathways to Power provides key historical insights into current social and cultural questions

Motivating Self and Others Martin E. Ford, Peyton R. Smith, 2020-10-22 This book describes the essential nature of human motivation by integrating the best ideas and evidence from motivational and evolutionary science In doing so the authors explain how the cultivation of goal life alignment and thriving with social purpose motivational patterns can inspire optimal functioning and enhance life meaning Readers are provided with a comprehensive framework for guiding research and intervention efforts along with motivational principles designed to summarize the major themes in effective efforts to motivate yourself and those you wish to help or encourage Special emphasis is placed on the importance of life meaning in

empowering our motivational systems and protecting us from downward spirals of disappointment and suffering Compelling evidence is provided to support the view that social purpose is as fundamental as self interest in human motivational systems The authors also focus on the catalytic role of social purpose in enabling humans to soar above all other species *The Early Evolutionary Imagination* Emelie Jonsson, 2021-09-29 Darwinian evolution is an imaginative problem that has been passed down to us unsolved It is our most powerful explanation of humanity's place in nature but it is also more cognitively demanding and less emotionally satisfying than any myth From the publication of the *Origin of Species* in 1859 evolution has pushed our capacity for storytelling into overdrive sparking fairy tales adventure stories political allegories utopias dystopias social realist novels and existential meditations Though this influence on literature has been widely studied it has not been explained psychologically This book argues for the adaptive function of storytelling integrates traditional humanist scholarship with current knowledge about the evolved and adapted human mind and calls for literary scholars to reframe their interpretation of the first authors who responded to Darwin *Advances in Biolinguistics* Koji Fujita, Cedric Boeckx, 2016-02-12 Biolinguistics is a highly interdisciplinary field that seeks the rapprochement between linguistics and biology Linking theoretical linguistics theoretical biology genetics neuroscience and cognitive psychology this book offers a collection of chapters situating the enterprise conceptually highlighting both the promises and challenges of the field and chapters focusing on the challenges and prospects of taking interdisciplinarity seriously It provides concrete illustrations of some of the cutting edge research in biolinguistics and piques the interest of undergraduate students looking for a field to major in and inspires graduate students on possible research directions It is also meant to show to specialists in adjacent fields how a particular strand of theoretical linguistics relates to their concerns and in so doing the book intends to foster collaboration across disciplines Chapter 1 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license **The Social Conquest of Earth** Edward O. Wilson, 2012-04-09 New York Times Bestseller and Notable Book of the Year A Kirkus Reviews Book of the Year Nonfiction Longlisted for the Andrew Carnegie Medal for Excellence Nonfiction From the most celebrated heir to Darwin comes a groundbreaking book on evolution the summa work of Edward O. Wilson's legendary career Sparking vigorous debate in the sciences *The Social Conquest of Earth* upends the famous theory that evolution naturally encourages creatures to put family first Discover Refashioning the story of human evolution Wilson draws on his remarkable knowledge of biology and social behavior to demonstrate that group selection not kin selection is the premier driving force of human evolution In a work that James D. Watson calls a monumental exploration of the biological origins of the human condition Wilson explains how our innate drive to belong to a group is both a great blessing and a terrible curse Smithsonian Demonstrating that the sources of morality religion and the creative arts are fundamentally biological in nature the renowned Harvard University biologist presents us with the clearest explanation ever produced as to the origin of the

human condition and why it resulted in our domination of the Earth's biosphere Late Quaternary Climate Change and Human Adaptation in Arid China D.B. Madsen, F. Chen, X. Gao, 2011-09-22 Due to political pressures prior to the 1990s little was known about the nature of human foraging adaptations in the deserts grasslands and mountains of north western China during the last glacial period Even less was known about the transition to agriculture that followed Now open to foreign visitation there is now an increasing understanding of the foraging strategies which led both to the development of millet agriculture and to the utilization of the extreme environments of the Tibetan Plateau This text explores the transition from the foraging societies of the Late Paleolithic to the emergence of settled farming societies and the emergent pastoralism of the middle Neolithic striving to help answer the diverse and numerous questions of this critical transitional period Examines the transition from foraging societies of the Late Paleolithic to the emergence of settled farming societies and the emergent pastoralism of the middle Neolithic Explores explanatory models for the links between climate change and cultural change that may have influenced the development of millet agriculture Reviews the relationship between climate change and population expansions and contradictions during the late Quaternary **Homo Symbolicus** Christopher S. Henshilwood, Francesco d'Errico, 2011-11-16 The emergence of symbolic culture classically identified with the European cave paintings of the Ice Age is now seen in the light of recent groundbreaking discoveries as a complex nonlinear process taking root in a remote past and in different regions of the planet In this book the archaeologists responsible for some of these new discoveries flanked by ethologists interested in primate cognition and cultural transmission evolutionary psychologists modelling the emergence of metarepresentations as well as biologists philosophers neuro scientists and an astronomer combine their research findings Their results call into question our very conception of human nature and animal behaviour and they create epistemological bridges between disciplines that build the foundations for a novel vision of our lineage's cultural trajectory and the processes that have led to the emergence of human societies as we know them *Renegotiating Disciplinary Fields in the Life Sciences* Alessandro Minelli, 2021-02-24 Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks There are also problems with the current definitions or circumscriptions of key concepts such as gene species and homology and even of whole disciplinary fields within the life sciences e.g. developmental biology These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences In the diversity of topics addressed and approaches to move beyond the current disciplinary organization the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences Moral Markets Paul J. Zak, 2010-12-16 Like nature itself modern economic life is driven by relentless competition and unbridled selfishness Or is it Drawing on converging evidence from neuroscience social science biology law and philosophy Moral Markets makes the case that modern market exchange works only because most people most of the time act virtuously Competition and greed are

certainly part of economics but *Moral Markets* shows how the rules of market exchange have evolved to promote moral behavior and how exchange itself may make us more virtuous. Examining the biological basis of economic morality tracing the connections between morality and markets and exploring the profound implications of both *Moral Markets* provides a surprising and fundamentally new view of economics one that also reconnects the field to Adam Smith's position that morality has a biological basis. *Moral Markets* the result of an extensive collaboration between leading social and natural scientists includes contributions by neuroeconomist Paul Zak economists Robert H Frank Herbert Gintis Vernon Smith winner of the 2002 Nobel Prize in economics and Bart Wilson law professors Oliver Goodenough Erin O'Hara and Lynn Stout philosophers William Casebeer and Robert Solomon primatologists Sarah Brosnan and Frans de Waal biologists Carl Bergstrom Ben Kerr and Peter Richerson anthropologists Robert Boyd and Michael Lachmann political scientists Elinor Ostrom and David Schwab management professor Rakesh Khurana computational science and informatics doctoral candidate Erik Kimbrough and business writer Charles Handy.

[Synergistic Selection: How Cooperation Has Shaped Evolution And The Rise Of Humankind](#) Peter A Corning, 2017-12-28 Nothing about the evolution of biological complexity makes sense except in the light of synergy. Peter Corning's new book is being hailed as a major contribution to what is perhaps the greatest shift in our understanding of evolution since *The Origin of Species*. It's a tour de force that takes us on a synergy guided tour of the history of life. As Corning puts it life on Earth has been a synergistic phenomenon from the get go. Corning also shows how synergy has been a key to human evolution including the rise of complex modern societies. Cooperation may have been the vehicle but synergy was the driver. As we now face a tipping point and another major transition in evolution Corning offers us a synergy based road map to the future. One of the great take home lessons from the epic of evolution is that cooperation produces synergy and synergy is the way forward. The arc of evolution bends toward synergy. Our Common Denominator Christoph Antweiler, 2016-04-01 Since the politicization of anthropology in the 1970s most anthropologists have been reluctant to approach the topic of universals that is phenomena that occur regularly in all known human societies. In this volume Christoph Antweiler reasserts the importance of these cross cultural commonalities for anthropological research and for life and co-existence beyond the academy. The question presented here is how anthropology can help us approach humanity in its entirety understanding the world less as a globe with an emphasis on

differences but as a planet from a vantage point open to commonalities
