Hand Book of Processed Functional Meat Products Sajad A. Rather, F. A. Masoodi, 2024-10-22. Functional food technology aims to boost consumer well-being by providing health benefits beyond that of fundamental nutrition. Meat and meat products have numerous disease-preventing and health-promoting benefits. However, the meat industry has faced many new challenges since the World Health Organization (WHO) studies suggesting that small increases in the risk of several cancers may be associated with high consumption of processed meat. In addition, consumers often associate meat with a negative health image. This negative image of meat is mainly due to fat content such as saturated fatty acids and cholesterol and process-induced toxicants like N-nitroso compounds and polycyclic aromatic hydrocarbons (PAHs) and the alliance of these with chronic diseases. In this context, the functional food concept applied to meat processing has gained importance, especially by reduction, replacement of fat, sodium nitrites, reduction of process-induced toxicants, and addition of beneficial components such as probiotics and bioactive compounds. Hand Book of Processed Functional Meat Products provides meat industry professionals with a step-by-step guide to post-mortem muscle chemistry, functional and cultured meat products, design and development, bioactive compounds, reduction of carcinogenic compounds, application of enzymes, and nanotechnology innovation in sensory assessment, authentication, and marketing, 3D printing in the development of meat-based products, and regulatory and consumer challenges in functional meat products. This book differs from other publications on functional meat product processing in that it offers comprehensive coverage and in-depth discussion of the most recent scientific and technological applications in functional meat products. Many meat science and technology books available on the market describe meat chemistry, properties, and basic science with only a rudimentary understanding of meat processing, functional meat products development, and applications. Therefore, this work will be helpful for food industry.
