Handbook Of Industrial Statistics1988:

Handbook of Industrial Statistics Industrial Development Organization,1988 Handbook of Industrial Statistics 1988 ,1988 UNIDO sales no E F 88 III E 5 In English and French The World Environment 1972-1992 O. El-Kholy,2012-12-06 Our planet is under siege Assaults on the atmosphere the greenhouse effect the depletion of the ozone layer and increasing air pollution pose a still unquantified threat to human life The dumping of hazardous wastes and land based sources of pollution present a similar threat to the oceans On land we are destroying a tropical forest the size of Austria every year and more than a hundred species of wild plants and animals are lost forever each day When the General Assembly of the United Nations established UNEP it charged us with reporting on the changing state of the world s environment tracking the underlying causes of change and working with governments to develop responses to those changes Every year since 1974 UNEP has produced a State of the Environment report focusing on one or more emerging environmental issues and always stressing the human factor the impact of environmental quality on people and society Three times since its inception 1982 1987 and 1992 UNEP has undertaken a more wide ranging study The results of the present study are the most disturbing of the three However not all the signs are negative Throughout the 1970s and into the 1980s UNEP was able to report progress in some important areas Environmental monitoring capacity was being rapidly improved in many parts of the world and Ministries of the Environment were being set up in an attempt to deal with environmental threats in a more coherent way **World Metal Demand** John E. Tilton,2015-06-03 In the early 1970s the post World War II boom in world metal consumption came to a halt As time passed it became clear that what many first thought to be a cyclical downturn was instead a long term substantial decline in world metal demand In this volume first published in 1990 editor John E Tilton and four fellow scholars of mineral economics analyse the causes and consequences of this decline and the prospects for future growth in world metal demand This book will be of interest to students of business and environmental studies **Imports and Growth in Highly Indebted Countries** Jesko Hentschel,2012-12-06 A real imports of capital and intermediate goods declined sharply for highly indebted countries in the 1980s these economies were faced with the need to substitute previously imported factors of production with domestic capital and labor The study empirically analyzes the degree of import dependence of twelve developing countries Estimates of the short run elasticity of substitution characterize both imported capital and intermediate goods to behave like complements in the production process in the developing countries Long run substitution elasticities differ considerably among the group of economies especially for imported machinery and equipment The results indicate that inward oriented strategies have not achieved the aim of reducing the import dependence of the developing economies In order to visualize the implications of the differing degree of import dependence a partial equilibrium econometric model is used to analyze the reaction of the trade account on external shocks and domestic policies in Columbia and Ecuador Simulations show that the dependence on imported production means

can transform an adjustment with growth of the external account into an adjustment or growth controversy

Industrial Ecology and Global Change R. Socolow, 1994 Discusses a different approach to addressing environmental problems aimed at a broad interdisciplinary audience

From Windfall to Curse? Jonathan Di John, 2015-12-21 Since the discovery of abundant oil resources in the 1920s Venezuela has had an economically privileged position among the nations of Latin America which has led to its being treated by economic and political analysts as an exceptional case In her well known study of Venezuela s political economy *The Paradox of Plenty* 1997 Stanford political scientist Terry Karl argued that this oil wealth induced extraordinary corruption rent seeking and centralized intervention that resulted in restricting productivity and growth What this and other studies of Venezuela s economy fail to explain however is how such conditions have accompanied both growth and stagnation at different periods of Venezuela s history and why countries experiencing similar levels of corruption and rent seeking produce divergent developmental outcomes By investigating the record of economic development in Venezuela from 1920 to the present Jonathan Di John shows that the key to explaining why the economy performed much better between 1920 and 1980 than in the post 1980 period is to understand how political strategies interacted with economic strategies specifically how politics determined state capacity at any given time and how the stage of development and development strategies affected the nature of political conflicts In emphasizing the importance of an approach that looks at the political economy not just at the economy alone Di John advances the field methodologically while he contributes to a
