Parliament. House of Commons. Public Accounts Committee,2009 In this report the Committee of Public Accounts revisits the Prison Service s procurement system five years after publishing a critical report on it 41st report session 2002 03 HC 676 ISBN 9780215012647 The Committee notes that the Service has responded positively and decisively It has implemented a new strategy and introduced a centralised professional procurement team supported by five regional procurement teams and a new information technology system As a direct result of implementing the Committee s recommendations the Service has

generated cash savings of 120 million to 2007-08. Whenever problems have been encountered the Service has addressed them promptly including difficulties in phasing in its new computer system. Compliance with laid down procedures is being tightened to ensure that all areas of the Service utilise the procurement system as effectively and efficiently as possible. The Ministry of Justice announced in October 2008 that it is to centralise procurement across the Ministry into a single function which would include the Prison Service. With a potential budget of 2.5 billion the new procurement function offers the opportunity to secure substantial savings.

Ecosystem Goods and Services from Plantation Forests Jürgen Bauhus, Markku Kanninen, Peter van der Meer, 2010. Plantation forests often have a negative image. They are typically assumed to be poor substitutes for natural forests, particularly in terms of biodiversity conservation, carbon storage, provision of clean drinking water and other non-timber goods and services. Often they are monocultures that do not appear to invite people for recreation and other direct uses. Yet as this book clearly shows they can play a vital role in the provision of ecosystem services when compared to agriculture and other forms of land use or when natural forests have been degraded. This is the first book to examine explicitly the non-timber goods and services provided by plantation forests including soil, water and biodiversity conservation.

as well as carbon sequestration and the provision of local livelihoods The authors show that if we require a higher provision of ecosystem goods and services from both temperate and tropical plantations new approaches to their management are required These include policies methods for valuing the services the practices of small landholders landscape approaches to optimise delivery of goods and services and technical issues about how to achieve suitable solutions at the scale of forest stands While providing original theoretical insights the book also gives guidance for plantation managers policy makers conservation practitioners and community advocates who seek to promote or strengthen the multiple use of forest plantations for improved benefits for society Published with CIFOR
