Doob, 2019-05-22 *Social Inequality and Social Stratification in US Society* uses a historical and conceptual framework to explain social stratification and social inequality. Analyzing the impact of capital types throughout the text helps map out the prospects for individuals, families, and also classes to maintain or alter their position in social stratification systems.

Mrs. Russell Sage Ruth Crocker, 2006-11-01 This is the biography of a ruling class woman who created a new identity for herself in Gilded Age and Progressive Era America. A wife who derived her social standing from her robber baron husband, Olivia Sage managed to fashion an image of benevolence that made possible her public career. In her husband's shadow for 37 years, she took on the Victorian mantle of active reforming womanhood. When Russell Sage died in 1906, he left her a vast fortune. An advocate for the rights of women and the responsibilities of wealth for moral reform and material betterment, she took the money and put it to her own uses. Spending replaced volunteer work, suffrage bazaars and fundraising fates gave way to large donations to favorite causes. As a widow, Olivia Sage moved in public with authority. She used her wealth to fund a wide spectrum of progressive reforms that had a lasting impact on American life, including her most significant philanthropy, the Russell Sage Foundation.

Death and Dollars Alicia H. Munnell, Annika Sunden, 2004-05-13 Despite the recent downturn in the stock market, the 1990s boom, and the shift to defined contribution plans, more individuals will have significant wealth upon retirement. How they use that wealth will determine not only their own well-being but also the living standards of their children, the resources available to philanthropies, and the level of investment capital in the economy. This volume explores the reasons why people save, how they decide to allocate their wealth once they retire, and how givers select their beneficiaries. It also assesses the extent to which the estate tax and annuitization of retirement wealth

affects the amount and nature of wealth transfers Finally it looks at the impact of wealth transfers first on the amount of aggregate saving and capital accumulation and then on the distribution of wealth among households Several conclusions emerge First gifts and bequests are important they may account for about half of total wealth in America Second rich people make most of the wealth transfers They are thoughtful about how much they pay in taxes and how they dispose of their wealth They care about philanthropic causes and view their charitable contributions as more than a way to avoid paying estate taxes Third most nonrich people probably have some lexicographic preferences about the disposition of their wealth they want to ensure they have adequate resources to take care of their own needs and if money is left over they would like it to go to their children Fourth little support has emerged for the pure altruistic model of bequests Fifth institutions matter In the case of the rich the estate tax probably reduces saving and increases bequests to charity In the case of the nonrich the shift to defined contribution plans will at a minimum mean that they have more wealth in their hands when they die and therefore they will leave larger accidental bequests It might also increase their interest in lea
