End Of Homework:

The End of Homework Etta Kralovec, John Buell, 2000 In a book that questions the value of homework the authors conduct a history of the American classroom as they forcefully advocate the protection of the leisure time of children *Closing The Book On Homework* John Buell, 2004 In this the sequel to his critically acclaimed and controversial *The End of Homework* John Buell extends his case against homework Arguing that homework robs children and parents of unstructured time for play and intellectual and emotional development *Closing the Book on Homework* offers a convincing case for why homework is an outgrowth of broader cultural anxieties about the sanctity of work itself After the publication of Buell's previous book many professional educators portrayed reducing homework as a dangerous idea while at the same time parents and teachers increasingly raised doubts as to its continued usefulness in education According to John Buell the importance of play is culturally underappreciated Not only grade schoolers but high school students and adult workers deserve time for the kind of leisure that fosters creativity and sustains a life long interest in learning Homework is assigned for many reasons many having little to do with learning including an accepted if unchallenged belief that it fosters good work habits for children's futures As John Buell argues convincingly homework does more to obstruct the growth of children's minds and consumes the time of parents and children who may otherwise develop relationships that foster true growth and learning A unique book that is sure to fuel the growing debate on school reform *Closing the Book on Homework* offers a roadmap for learning that will benefit the wellbeing of children parents and teachers alike Ending the Homework Hassle John Rosemond, John K. Rosemond, 1990 Homework can be one of the most frustrating of all problem areas for children and parents In this helpful guide Rosemond warns against parental interference and demonstrates ways to help children learn to work on their own and to take responsibility for getting the work done themselves **ENC Focus Review** , The Diary of a Mad Public School Teacher David A. Hancock MA, 2017-07-21 Many are asking what is wrong with teaching learning schooling and education and what can be done You will get the answers panacea from the letters of a mad public school teacher intrepid irascible cantankerous provocative passionate thought provoking iconoclastic and enhanced with vitriolic demagoguery As a grad student colleague said Thanks for an enjoyable class on education issues in society I also enjoyed your letters to the editor Ive been told that I say what other people think Well you write and publish what were all thinking **The Rebooting of a Teacher's Mind** Brenda A. Dyck, 2004 **Puerto Rican Women and Work** Altagracia Ortiz, 1996-10-03 Puerto Rican Women and Work Bridges in Transnational Labor is the only comprehensive study of the role of Puerto Rican women workers in the evolution of a transnational labor force in the twentieth century This book examines Puerto Rican women workers both in Puerto Rico and on the U S mainland It contains a range of information historical ethnographic and statistical The contributors provide insights into the effects of migration and unionization on women's work taking into account U S colonialism and globalization of capitalism throughout the century as well as the impact of Operation Bootstrap The essays

are arranged in chronological order to reveal the evolutionary nature of women's work and the fluctuations in migration technology and the economy This one of a kind collection will be a valuable resource for those interested in women's studies ethnic studies and Puerto Rican and Latino studies as well as labor studies The Wrong Direction Richard S. Hancock,2005 Is our public education system headed in the wrong direction Richard Hancock asks us not only to scrutinize education but to consider crucial pragmatic revisions He looks hard at some of the negative trends which have become entrenched including grade inflation and social promotion and a variety of biases which undermine the integrity of the system He suggests workable solutions The book addresses a wide audience students parents educators and administrators in the public system and realms of higher learning government members professionals service and business people Hancock also refers to others who are striving to bring the plight of the system to the attention of the public and the educational policy makers We cannot continue to stifle the brilliant condescend to special interest groups and ignore the average students cheating them all of pride in honest achievement Perhaps it is time to encourage and honour excellence This is at once a warning and a voice encouraging us to act on behalf of our children and our nation **ERS Focus on Homework** ,2004

Schools That Do Too Much Etta Kralovec,2004-01-05 Schools That Do Too Much argues that American schools systematically mispend their two most precious resources time and money From class schedules that fragment students time to budgets that sink money into dozens of activities especially sports that distract from learning Kralovec shows us how schools over and over try to do too much and end up delivering too little by way of real teaching and learning

Mathematical Mindsets Jo Boaler,2015-10-12 Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children even those who are convinced that they are bad at math that they can enjoy and succeed in math Jo Boaler Stanford researcher professor of math education and expert on math learning has studied why students don't like math and often fail in math classes She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home This book bridges that gap by turning research findings into practical activities and advice Boaler translates Carol Dweck's concept of mindset into math teaching and parenting strategies showing how students can go from self doubt to strong self confidence which is so important to math learning Boaler reveals the steps that must be taken by schools and parents to improve math education for all Mathematical Mindsets Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math so they end up leaving school without an understanding of basic mathematical

concepts Their evasion and departure hinders math related pathways and STEM career opportunities Research has shown very clear methods to change this phenomena but the information has been confined to research journals until now Mathematical Mindsets provides a proven practical roadmap to mathematics success for any student at any age

Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors

issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community. In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them. This volume is unique as it directly discusses methodological issues in large scale studies and reports empirical data from large scale studies.
