**Endocrine Disruption** David O. Norris, James A. Carr, 2023 This book addresses the biological effects of the large number of compounds that have been recognised as endocrine disrupters presents the relevant fundamentals of the endocrine systems of animals and humans the toxicology ecology and risk assessment methods and lays out the current state of understanding for the field

Endocrine Disruption David O. Norris, James A. Carr, 2005-09-22 This book addresses the biological effects of the reasonably large number of classes of compounds that have been recognized as endocrine disrupters These compounds have been found to persist as pollutants in the environment and have been blamed for causing developmental disorders and or fertility problems in fish amphibians reptiles birds and possibly humans This book presents the relevant fundamentals of the endocrine systems of animals and humans the toxicology developmental toxicology ecology and risk assessment methods and lays out the current state of understanding for the whole field organized by the classes of compounds that have been identified as endocrine disrupters

**Environmental Chemistry** Stanley E Manahan, 2017-02-24 With clear explanations real world examples and updated questions and answers the tenth edition of Environmental Chemistry emphasizes the concepts essential to the practice of environmental science technology and chemistry while introducing the newest innovations in the field The author follows the general format and organization popular in preceding editions including an approach based upon the five environmental spheres and the relationship of environmental chemistry to the key concepts of sustainability industrial ecology and green chemistry This readily adaptable text has been revamped to emphasize important topics such as the world water crisis It details global climate change to a greater degree than previous editions underlining the importance of abundant renewable energy in minimizing human influences on climate Environmental Chemistry is designed for a wide range of graduate and undergraduate courses in environmental chemistry environmental science and sustainability as well as serving as a general reference work for professionals in the environmental sciences and engineering

*Fundamentals of Environmental and Toxicological Chemistry* Stanley E. Manahan, 2013-02-25 Fundamentals of Environmental and Toxicological Chemistry Sustainable Science Fourth Edition covers university level environmental chemistry with toxicological chemistry integrated throughout the book This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry It is organized based on the five spheres of Earth's environment 1 the hydrosphere water 2 the atmosphere air 3 the geosphere solid Earth 4 the biosphere life and 5 the anthrosphere the part of the environment made and used by humans The first chapter defines environmental chemistry and each of the five environmental spheres The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry Subsequent chapters are grouped by sphere beginning with the hydrosphere and its environmental chemistry water pollution sustainability and water as nature's most renewable resource Chapters then describe the atmosphere its structure and importance for protecting life on Earth air pollutants and the sustainability of

atmospheric quality The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability He also describes the biosphere and its sustainability The final sphere described is the anthrosphere The text explains human influence on the environment including climate pollution in and by the anthrosphere and means of sustaining this sphere It also discusses renewable nonpolluting energy and introduces workplace monitoring For readers needing additional basic chemistry background the book includes two chapters on general chemistry and organic chemistry This updated edition includes three new chapters new examples and figures and many new homework problems *Biodiversity and Health* Serge Morand, Claire Lajaunie, 2017-11-27 There is a gap between the ecology of health and the concepts supported by international initiatives such as EcoHealth One Health or Planetary Health a gap which this book aims to fill Global change is accelerated by problems of growing population industrialization and geopolitics and the world's biodiversity is suffering as a result which impacts both humans and animals However Biodiversity and Health offers the unique opportunity to demonstrate how ecological environmental medical and social sciences can contribute to the improvement of human health and wellbeing through the conservation of biodiversity and the services it brings to societies This book gives an expansive and integrated overview of the scientific disciplines that contribute to the connection between health and biodiversity from the evolutionary ecology of infectious and non infectious diseases to ethics law and politics Presents the first book to give a broad and integrated overview of the scientific disciplines that contribute to health From evolutionary ecology to laws and policies this book explores the links between health and biodiversity Demonstrates how ecological sciences environmental sciences medical sciences and social sciences may contribute to improve human health
