**Endocrine Treatment of Breast Cancer** B. Henningsen, F. Linder, C. Steichele, 2012-12-06 Progress in basic research has made it necessary to redetermine the possibility of classic endocrine therapy for the treatment of patients with breast cancer Exemplary close cooperation between biochemistry and animal and clinical research led to a truly interdisciplinary and international exchange of ideas and experience at a symposium held in autumn 1978 in Heidelberg We owe our thanks to ICI Pharma for the kind support of this symposium The participation of Charles Huggins in the meeting as honorary chairman signified to all participants the meaning of this joint endeavour It was the same Charles Huggins who through experimental work laid the foundation stone for endocrine therapy of prostate and breast cancer and who applied his findings clinically Thousands of patients owe to him relief from their suffering He contributed greatly to the attempt to find and stabilize the endocrine therapy for breast cancer for which we thank him sincerely We hope that the following contributions will similarly serve the well being of our patients

*Endocrine Therapies in Breast and Prostate Cancer* C. Kent Osborne, 2012-12-06 It has been recognized for many years that cancers originating in the breast and prostate gland are frequently endocrine dependent Traditional therapies included surgical endocrine ablative procedures or pharmacologic hormone administration both designed to antagonize the stimulatory effects of sex steroid hormones In the past decade several new treatment strategies for these tumors have emerged from basic studies in reproductive biology and mechanisms of action of steroid hormones In some instances these new treatments have eliminated or reduced the need for major surgical ablative procedures or for toxic hormone therapy The clinical role for other new treatments has not yet been clearly defined although exciting preliminary data from recent clinical trials are now available Thus an objective review of the current status of these new therapeutic approaches is of interest In this volume we have attempted to provide an in depth review of both basic and clinical research involving several new treatment strategies for breast and prostate cancer The first three chapters summarize preclinical and clinical studies of the luteinizing hormone releasing hormone analogues which can be used effectively to induce medical castration Chapters 4 5 and 6 review the

rationale and clinical use of the compounds known collectively as the aromatase inhibitors which can also be used to suppress sex steroid hormone levels. Antiestrogen mechanism of action and its clinical implications for the design of innovative treatment approaches is considered in chapters 7 and 8.

**Endocrine Therapy of Breast Cancer VI** Anthony Howell, 1994-01-01

This is the sixth issue of the Monograph on various aspects of the Endocrine Therapy of Breast Cancer. The monograph includes a broad spectrum of issues including aspects of breast cancer prevention and molecular genetics, autocrine and paracrine growth factors, the molecular biology of the oestrogen receptor and methods of abrogating endocrine resistance and new aspects of the therapy with antioestrogens and antiprogestogens. There are also chapters on aspects of immunotherapy and adjuvant chemo-endocrine therapy and quality of life issues. Special importance is given to the biological basis of the effects of endocrine therapy. In addition to novel endocrine treatments, the effects of combined chemotherapy and endocrine therapy in the adjuvant situation are discussed. Breast cancer continues to represent an enormous challenge both to the basic scientist and to the clinical researcher. The latest issue of the European School of Oncology Monograph will be helpful in promoting cross fertilisation between the basic and applied disciplines.

Endocrine Therapy of Breast Cancer VI Anthony Howell, 1994. The European School of Oncology came into existence to respond to a need for information, education and training in the field of the diagnosis and treatment of cancer. There are two main reasons why such an initiative was considered necessary. Firstly, the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated. Secondly, the rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly. With its residential courses for organ pathologies and the seminars on new techniques, laser, monoclonal antibodies, imaging techniques etc. or on the principal therapeutic controversies, conservative or mutilating surgery, primary or adjuvant chemotherapy, radiotherapy alone or integrated, it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice. One of the more recent initiatives of ESO has been the institution of permanent study groups, also called task forces, where a limited number of leading experts are invited to meet once a year with the aim of defining the state of the art and possibly reaching a consensus on future developments in specific fields of oncology.

Endocrine Therapy for Breast Cancer James N. Ingle, Mitchell Dowsett, 2004-07-02. Because of the predominant role estrogens play in the development of breast cancer and the limited effectiveness of tamoxifen therapy, more selective therapeutics targeting estrogen signaling have been developed: selective estrogen receptor modulators (SERMs), selective estrogen receptor downregulators (SERDs), and a third generation of drugs that inhibit the aromatase required for estrogen biosynthesis. The authors examine clinical and
