Endocrine Disrupting Chemicals:

Endocrine Disrupting Chemicals R M Harrison, R E Hester, 2007-10-31 Long term environmental effects of chemical exposure have long been of concern and more recently chemicals which cause changes to the sexual development of exposed organisms have been identified. It is thought that low level exposure to a wide range of chemicals may be affecting endocrine function leading to a reduction in fertility and an increase in reproductive cancers. *Endocrine Disrupting Chemicals* reviews the scientific evidence and attempts to put the subject into context. Along with an overview of the issue there is discussion of the specialised aspects in relation to wildlife environmental oestrogens and male reproduction and naturally occurring oestrogenic substances. With contributions from representatives of the Medical Research Council's Institute for Environment and Health and the US Environmental Protection Agency the articles provide a comprehensive and detailed review of current issues. This book will be of interest to a wide readership including industrial and environmental scientists, managers and policy makers.

Endocrine-Disrupting Chemicals Andrea C. Gore, 2007-06-08 This book provides comprehensive coverage of the three most important themes in the field of Endocrine Disrupting Chemicals: EDC research, the basic biology of EDCs, particularly their effects on reproductive systems; EDC effects on humans and wildlife including biomedical considerations and potential interventions; and practical advice for dealing with the problem of EDCs.

Endocrine Disruptors, Brain, and Behavior Heather B. Patisaul, Scott M. Belcher, 2017-04-10 Our world and bodies are becoming increasingly polluted with chemicals capable of interfering with our hormones and thus possibly our present and future neural and mental health. This book focuses on if and how these chemicals, known as endocrine disrupting compounds (EDCs), affect the development and function of the brain and might be contributing to neural disorders rapidly rising in prevalence. It provides an overall synthesis of the EDC field including its historical roots, major hypotheses, key findings, public health policy implications, and research gaps.

Endocrine-Disrupting Chemicals Paromita Chakraborty, Girija K. Bharat, Brij Mohan Sharma, Pardeep Singh, 2023-11-24 *Endocrine Disrupting Chemicals: Fate, Detection and Remediation* provides both the practical and theoretical aspects of the origin and removal of EDCs. The book integrates in one system all relevant research in monitoring, detection and control and provides a multi-barrier approach to managing EDCs that helps relevant stakeholders take preventive measures for the risks associated with EDCs in the environment, e.g. water, wastewater, soil and other natural ecosystems. The book not only provides a technological solution for managing these emerging pollutants but also comprehensively treats the origin, fate and mechanisms of EDCs. This makes the book an indispensable source of information.

The (Non) Regulation of Endocrine Disrupting Chemicals David Tuller, 2013

This dissertation investigates efforts in the United States to regulate endocrine disrupting chemicals In 1996 Congress mandated the U S Environmental Protection Agency to establish a screening program for chemicals that appeared to interfere with the actions of estrogens androgens and thyroid hormones no chemicals have yet proceeded through the full complement of assays and many details of the program remain unresolved Moreover much is still unknown about endocrine disrupting chemicals complicating the tasks of assessing and regulating them for example there is significant scientific support for the notion that they can exert effects at very low doses but industry disputes such findings Without an effective Endocrine Disruptor Screening Program EDSP human and wildlife

population continue to be exposed to possible endocrine disruptors with long term consequences that remain unclear This dissertation examines how industry stakeholders non governmental organizations and others have framed the scientific issues and sought to influence regulators consumers and other audiences through public comment ex parte meetings and media coverage It examines 1 public comments from stakeholders in response to the first draft list of chemicals for the EDSP 2 private meetings between industry representatives and the EPA about key aspects of the EDSP and 3 news coverage of phthalates and in particular advocacy efforts to raise awareness about their presence in brand name consumer goods The results of this investigation suggest that while industry stakeholders might not appear to have significant impact on the content of rules the regulatory process has nonetheless provided them with multiple opportunities to delay the process of EDSP development The results also suggest that environmental and public health advocates can find different strategies for effecting policy change with the news media playing a key role In particular offering new forms of evidence and altering public perceptions about the potential hazards of everyday consumer products can exert pressure on corporations to change behaviors and reformulate products and on politicians to take legislative action against particularly worrisome chemicals The trade off is that the benefits might be far narrower in scope as in this particular case limited to phthalates in toys and personal care products than the protections envisioned as part of an overarching structure like the EDSP
