Endocrinology of Selected Invertebrate Types Hans Laufer, Roger G. Downer, 1988-04 *Recent Advances in Arthropod Endocrinology* Geoffrey M. Coast, Simon G. Webster, 1998-02-26 A unique summary of some of the most significant and exciting recent advances in arthropod endocrinology *The Nervous Systems of Invertebrates: An Evolutionary and Comparative Approach* O. Breidbach, W. Kutsch, 2013-03-07 In this volume outstanding specialists review the state of the art in nervous system research for all main invertebrate groups They provide a comprehensive up to date analysis important for everyone working on neuronal aspects of single groups as well as taking into account the phylogenesis of invertebrates The articles report on recently gained knowledge about diversification in the invertebrate nervous systems and demonstrate the analytical power of a comparative approach Novel techniques in molecular and developmental biology are creating new perspectives that point toward a theoretical foundation for a modern organismic biology The comparative approach as documented here will engage the interest of anyone challenged by the problem of structural diversification in biology

Environmental Endocrine Disruptors A Crain, L J Guillette Jr, 2000-08-17 Addresses many aspects of endocrine disruption by environmental encountered toxic substances Initial chapters provide essential background information whilst later chapters address specific aspects of endocrine disrupting contaminants EDC *Insect Neurochemistry and Neurophysiology* · 1989 · A. B. Borkovec, Edward P. Masler, 2012-12-06 This volume contains the proceedings of the Third International Conference on Insect Neurochemistry and Neurophysiology ICINN 89 which was held at the University of Maryland at College Park Maryland on July 10 12 1989 The ICINN meetings were initiated in 1983 at a time when insect neurobiology was emerging as a vigorous sector of entomology requiring a degree of attention and autonomy long before granted to its sister field vertebrate neurobiology The distinctly medical aspects of the latter were replaced by potentialities for developing new approaches to insect control and the difference was reflected in the kind of sponsorship that has made the ICINNs possible It is to the credit of the sponsors of the present conference i e Agricultural Research Service US Department of Agriculture American Cyanamid BASF Dow Chemical USA E I DuPont de Nemours Monsanto Nippon Soda Rohm and Haas and Sandoz Crop Protection that they recognized the need for providing a forum for specialized scientific presentations as well as a medium by which ideas and information could be exchanged directly and cooperation could be planned As in the previous conferences in 1983 and 1986 the ICINN 89 program contained state of the art plenary lectures or reviews by invited speakers as well as shorter research communications presented orally or as posters The latter two are included here in three sections neuroanatomy neurochemistry and neurophysiology **Encyclopedia of Animal Behavior** , 2009-04-01 The Encyclopedia of Animal Behavior Three Volume Set has engaged with great success the efforts of many of the best behavioral biologists of the 21st century Section editors drawn from the most accomplished behavioral scientists of their generation have enrolled an international cast of highly respected thinkers and writers all of whom have taken great

modern methods Advances in Trematode Biology updates researchers practitioners and students with new information in immunology biochemistry physiology and molecular biology Advances in Trematode Biology includes practical information on parasitological techniques emphasizing species of medical and veterinary importance a key reference for parasitologists biologists medical and veterinary personnel The excellent presentation of material including well organized tables and chapters make Advances in Trematode Biology easy to use both as a textbook and as a reference **Neurobiology of**

Motor Programme Selection J. Kien, C.R. McCrohan, W. Winlow, 2013-10-22 The traditional view of motor systems as a linear chain of elements switched on and off by command neurons has become increasingly difficult to maintain in the face of accumulating evidence against the existence of command elements So far however the general formulation of an alternative approach has been lacking This book by summarising the evidence against the linear approach to motor systems argues forcefully against it Analyses are presented of motor systems ranging from the lobster stomatogastric system through molluscan systems leech movement insect singing and locomotion fish and amphibian behaviour to goal directed movements in primates and volitional movements in humans Comparison of these motor systems reveal the existence of some general principles underlying motor control and behavioural choice such that motor systems appear generally to be parallel distributed processing networks By discussing the treatment of motor systems in terms of parallel distributed processing systems this book presents in concentrated form an alternative to the earlier view of motor systems As such the book is a must for all neuroscientists interested in the organisation of motor systems and the neuronal substrates of behavioural choice

Biology of Turbellaria and some Related Flatworms Lester R.G. Cannon, 2012-12-06 Turbellaria the mainly free living flatworms and some of their parasitic relatives are among the simplest of the metazoa and as such provide ideal models for a wide range of fundamental studies The 60 contributions to Biology of Turbellaria and some Related Flatworms cover taxonomy and phylogeny biogeography and genetics ecology and behaviour Anatomy and ultrastructure development and regeneration genes and sequences and neurophysiology Biology of Turbellaria and some Related Flatworms is the most recent compilation in the series published in Hydrobiologia since 1981 covering research on these flatworms assembled by the world's leading authorities on the group Audience These papers present the advanced student and serious researcher with up to date information on an important but often neglected group whose place in the animal kingdom demands greater attention

Marine Shrimp Culture A.W. Fast, L.J. Lester, 2013-10-22 The commercial culture of marine shrimp in tropical areas has grown at a phenomenal rate during the last 10 to 15 years This book provides a description of principles and practices of shrimp culture at one point in time and documents both historical events and conditions now It also tries to look into the future The volume provides both practical information about shrimp culture as well as basic information on shrimp biology It should be of value to researchers consultant practitioners and potential investors in the marine shrimp culture industry *Shrimps* Raymond T. Bauer, 2023-04-08 This book explores the biology of decapod shrimps a group of animals

known to most people as a nutritious and tasty food item Shrimps are amazingly diverse in size shape coloration behavior and natural history Shrimp fisheries and aquaculture are a vital part of the USA and world economies These crustaceans are key ecological and food web components of marine and freshwater habitats The book synthesizes information on the taxonomic and ecological diversity of shrimps the structure and function of shrimp anatomy antifouling adaptations coloration and camouflage reproductive biology sexual systems mating systems and behavior life history strategies symbioses between shrimps and other organisms shrimp fisheries and aquaculture as well as the evolution and phylogeny of shrimps All chapters are written within an adaptational and evolutionary perspective Important questions about shrimp biology are asked and hypotheses for testing in future research are proposed The book is spiced up with personal anecdotes and observations from the author s research experiences This book is intended as a comprehensive reference a go to book about the biology of shrimps The text is scientifically rigorous but written in a style intended for a varied readership Thus the book is a valuable resource for budding or working research scientists such as zoologists aquatic biologists fisheries and aquaculture professionals as well as amateur naturalists aquarium hobbyists and interested laypersons As the saying goes a picture is worth a thousand words so that the book is amply illustrated with figures and diagrams The numerous color plates composed of photos contributed by expert colleagues make the world of shrimps come alive

Recent Developments in Insect Neurohormones M. Raabe,2012-12-06 The most striking fact revealed by investigations of insect neurohormones is that insects are as well supplied with neurohormones as mammals since neurohormones regulate not only the functioning of the endocrine glands prothoracic gland and corpora allata but also most physiological processes Our knowledge of neurohormones developed originally from anatomocytological investigations and experimental studies Today accurate bioassays have been devised for studying both in vivo and in vitro physiological processes and RIA determination has yielded knowledge of titer modifications of humoral factors Much is also known about neurohormone purification and several neurohormones have even been identified in different species Immunocytochemistry has made it possible to demonstrate in their origin and release sites the presence of insect neurohormones whose structure has been elucidated Moreover the presence of vertebrate and invertebrate neuropeptides has been demonstrated in insects As regards biogenic amines methods of detection have been greatly refined and it is now possible to identify the cell bodies and axons of the main biogenic amines Other new methods such as cobalt chloride impregnation or Lucifer yellow staining have revealed the axonal pathways and the location of particular neurons The mechanisms of action of neurohormones have been investigated in several cases and the results of these investigations will be related in the chapters which follow
