Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological

approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

The British National Bibliography Arthur James Wells,2005 **Being and Becoming Scientists Today** Susan A. Kirch,Michele Amoroso,2016-02-10 Can I contribute to science Do I like to work on the problems of science How do scientists know what they know Would I like to be become a scientist These are questions that interest new science students The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning They argue that students are typically taught from a disciplinary perspective of science Using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be useful for practicing scientists but not ideal for young learners In this disciplinary approach to science education there is little room for development as a scientist In contrast the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity The historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings In *Being and Becoming Scientists Today* the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals In these ways the authors promote the idea that all science learners contribute to the science in our lives *Weird Science and Bizarre Beliefs* Gregory L. Reece,2008-10-30 Does the giant Yeti roam the mountain ranges of Tibet Does a real life Shangri La lie waiting to be discovered in a Himalayan valley Do transmissions from lost civilizations beam messages of salvation to humankind What

lost creatures lurk in the murky depths of Scotland's brooding Loch Ness And who or what is responsible for the implacable monoliths which tower over Easter Island The obsession that so many now have with the uncanny and the unnatural is in itself a mystery It prompts serious questions which could have remarkable answers Drinking deep from the wells of esoteric knowledge Greg Reece undertakes a heroic quest for solutions Braving the darkest recesses of cult belief he stalks the twilight borderlands of contemporary culture where at the outer edges of mainstream thought things become downright freaky and outlandish Taking his life in both hands the author explores a subterranean cavern reputed to be the home of elusive blue skinned troglodytes goes hiking in the backwoods for a glimpse of Bigfoot investigates the truth of Alternative Archaeology in search of Atlantis and tests for himself the time travel and anti gravity theories of famed inventor Nikola Tesla Unashamedly revelling in the unexplained Weird Science and Bizarre Beliefs is both a penetrating analysis of the hidden underbelly of science pseudo science and religion as well as an unforgettable journey into the innermost depths of the fantastic the extraordinary and the peculiar

The Cultural Creatives Paul H. Ray, Ph.D., Sherry Ruth Anderson, 2001-10-02 ARE YOU A CULTURAL CREATIVE Do you dislike all the emphasis in modern culture on success and making it on getting and spending on wealth and luxury goods Do you care deeply about the destruction of the environment and would pay higher taxes or prices to clean it up and to stop global warming Are you unhappy with both the left and the right in politics and want to find a new way that does not simply steer a middle course In this landmark book sociologist Paul H Ray and psychologist Sherry Ruth Anderson draw upon thirteen years of survey research studies on more than 100 000 Americans They reveal who the Cultural Creatives are and the fascinating story of their emergence over the last generation using vivid examples and engaging personal stories to describe their distinctive values and lifestyles The Cultural Creatives offers a more hopeful future and prepares us all for a transition to a new saner and wiser culture **United States**
