Energy Reduction at U.S. Air Force Facilities Using Industrial Processes National Research Council,Division on Engineering and Physical Sciences,Air Force Studies Board,Committee on Energy Reduction at U.S. Air Force Facilities Using Industrial Processes: A Workshop,2013-02-04 The Department of Defense DoD is the largest consumer of energy in the federal government In turn the U S Air Force is the largest consumer of energy in the DoD with a total annual energy expenditure of around 10 billion Approximately 84 percent of Air Force energy use involves liquid fuel consumed in aviation whereas approximately 12 percent is energy primarily electricity used in facilities on the ground This workshop was concerned primarily with opportunities to reduce energy consumption within Air Force facilities that employ energy intensive industrial processes for example assembly disassembly painting metal working and operation of radar facilities such as those that occur in the maintenance depots and testing facilities Air Force efforts to reduce energy consumption are driven largely by external goals and mandates derived from Congressional legislation and executive orders To date these goals and mandates have targeted the energy used at the building or facility level rather than in specific industrial processes In response to a request from the Deputy Assistant Secretary of the Air Force for Energy and the Deputy Assistant Secretary of the Air Force for Science Technology and Engineering the National Research Council under the auspices of the Air Force Studies Board formed the Committee on Energy Reduction at U S Air Force Facilities Using Industrial Processes A Workshop The terms of reference called for a committee to plan and convene one 3 day public workshop to discuss

- 1 what are the current industrial processes that are least efficient and most cost ineffective
- 2 what are best practices in comparable facilities for comparable processes to achieve energy efficiency
- 3 what are the potential applications for the best practices to be found in comparable facilities for comparable processes to achieve energy efficiency
- 4 what are constraints and considerations that might limit applicability to Air Force facilities and processes over the next ten year implementation time frame
- 5 what are the costs and paybacks from implementation of the best practices
- 6 what will be a proposed resulting scheme of priorities for study and implementation of the identified best practices
- 7 what does a holistic representation of energy and water consumption look like within operations and maintenance

Energy and Environmental Challenges to Security Stephen Stec,Besnik Baraj,2009-01-29 On 21 November 2007 the grand and elegant Delegates Hall of the Hungarian Parliament was the scene of the opening of a conference to discuss some of the most pressing issues of the day those related to our unending thirst for energy its environmental consequences and the challenges

that these bear on security Over the next 3 days scientists parliamentarians and their guests confronted challenged teased and cajoled each other in a NATO Advanced Research Workshop ARW entitled Energy and Environmental Challenges to Security affirming that knowledge and public service hold the keys to solving our greatest challenges The magnitude of the security challenge was confirmed while this volume was being prepared In mid 2008 the International Energy Agency issued a report concluding that US 45 trillion would be needed over the next half century to prevent energy shortages and greenhouse gas emissions from undermining global economic growth But lest such large numbers cause us all to shrug this volume brings attention to some of the more manageable aspects of the environment and energy security challenge from addressing conflict resources such as illegal timber that contribute to corruption and regional instability to means and mechanisms to enable the diversification of energy supplies to environmental risk reduction strategies for particular installations The participants in the Hungarian Parliament building were atypical for a NATO Advanced Research Workshop

Energy Security Challenges for the 21st Century Gal Luft, Anne Korin, 2009-08-10 The impact of energy on global security and economy is clear and profound and this is why in recent years energy security has become a source of concern to most countries However energy security means different things to different countries based on their geographic location their endowment of resources their strategic and economic conditions In this book Gal Luft and Anne Korin with the help of twenty leading experts provide an overview of the world's energy system and its vulnerabilities that underlay growing concern over energy security It hosts a debate about the feasibility of resource conflicts and covers issues such as the threat of terrorism to the global energy system maritime security the role of multinationals and non state actors in energy security the pathways to energy security through diversification of sources and the development of alternative energy sources It delves into the various approaches selected producers consumers and transit states have toward energy security and examines the domestic and foreign policy tradeoffs required to ensure safe and affordable energy supply The explains the various pathways to energy security and the tradeoffs among them and demonstrates how all these factors can be integrated in a larger foreign and domestic policy framework It also explores the future of nuclear power the complex relations between energy security and environmental concerns and the role for decentralized energy as a way to enhance energy security
