An Assessment of the SBIR Program at the National Science Foundation National Research Council, Policy and Global Affairs, Committee for Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program, 2008-07-26 The Small Business Innovation Research SBIR program is one of the largest examples of U S public private partnerships Founded in 1982 SBIR was designed to encourage small business to develop new processes and products and to provide quality research in support of the many missions of the U S government including health energy the environment and national defense In response to a request from the U S Congress the National Research Council assessed SBIR as administered by the five federal agencies that together make up 96 percent of program expenditures This book one of six in the series reports on the SBIR program at the National Science Foundation The study finds that the SBIR program is sound in concept and effective in practice but that it can also be improved Currently the program is delivering results that meet most of the congressional objectives including stimulating technological innovation increasing private sector commercialization of innovations using small businesses to meet federal research and development needs and fostering participation by minority and disadvantaged persons The book suggests ways in which the program can improve operations continue to increase private sector commercialization and improve participation by women and minorities

Van Nostrand's Scientific Encyclopedia Douglas M. Considine, Glenn D. Considine, 2013-12-11 Advancements in science and engineering have occurred at a surprisingly rapid pace since the release of the seventh edition of this encyclopedia Large portions of the reference have required comprehensive rewriting and new illustrations Scores of new topics have been included to create this thoroughly updated eighth edition The appearance of this new edition in 1994 marks

the continuation of a tradition commenced well over a half century ago in 1938 Van Nostrand's Scientific Encyclopedia First Edition was published and welcomed by educators worldwide at a time when what we know today as modern science was just getting underway The early encyclopedia was well received by students and educators alike during a critical time span when science became established as a major factor in shaping the progress and economy of individual nations and at the global level A vital need existed for a permanent science reference that could be updated periodically and made conveniently available to audiences that numbered in the millions The pioneering VNSE met these criteria and continues today as a reliable technical information source for making private and public decisions that present a backdrop of technical alternatives

Nanolubricants Jean Michel Martin, Nobuo Ohmae, 2008-04-30 The technology involved in lubrication by nanoparticles is a rapidly developing scientific area and one that has been watched with interest for the past ten years Nanolubrication offers a solution to many problems associated with traditional lubricants that contain sulphur and phosphorus and though for some time the production of nanoparticles was restricted by the technologies available today synthesis methods have been improved to such a level that it is possible to produce large quantities relatively cheaply and efficiently Nanolubricants develops a new concept of lubrication based on these nanoparticles and along with the authors own research it synthesises the information available on the topic of nanolubrication from existing literature and presents it in a concise form Describes the many advantages and potential applications of nanotechnology in the tribological field Offers a full review of the state of the art as well as much original research that is yet unpublished Includes sections on boundary lubrication by colloidal systems nanolubricants made of metal dichalcogenides carbon based nanolubricants overbased detergent salts nanolubricants made of metals and boron based solid nanolubricants and lubrication additives Authored by highly regarded experts in the field with contributions from leading international academics Nanolubricants will appeal to postgraduate students academics and researchers in mechanical engineering chemical engineering and materials science It should also be of interest to practising engineers with petroleum companies and mechanical manufacturers Annual Report to Congress on the Automotive Technology Development Program ,1993
