Engineering William Henry Davenport, Daniel M. Rosenthal, 1966 **The Technologisation of the Social** Paul O'Connor, Marius Ion Bența, 2021-12-30 In an era of digital revolution artificial

intelligence big data and augmented reality technology has shifted from being a tool of communication to a primary medium of experience and sociality Some of the most basic human capacities are increasingly being outsourced to machines and we increasingly experience and interpret the world through digital interfaces with machines becoming ever more social beings Social interaction and human perception are being reshaped in unprecedented ways This book explores this technologisation of the social and the attendant penetration of permanent liminality into those aspects of the lifeworld where individuals had previously sought some kind of stability and meaning Through a historical and anthropological examination of this phenomenon it problematises the underlying logic of limitless technological expansion and our increasing inability to imagine either ourselves or our world in other than technological terms Drawing on a variety of concepts from political anthropology including liminality the trickster imitation schismogenesis participation and the void it interrogates the contemporary technological revolution in a manner that will be of interest to sociologists social and anthropological theorists and scholars of science and technology studies with interests in the digital transformation of social life Fundamental Principles of Heat Transfer Stephen Whitaker, 2013-10-22 Fundamental Principles of Heat Transfer introduces the fundamental concepts of heat transfer conduction convection and radiation It presents theoretical developments and example and design problems and illustrates the practical applications of fundamental principles The chapters in this book cover various topics such as one dimensional and transient heat conduction energy and turbulent transport forced convection thermal radiation and radiant energy exchange There are example problems and solutions at the end of every chapter dealing with design problems This book is a valuable introductory course in heat transfer for engineering students *Science, Technology, and Public Policy: Books, monographs, documents, and articles in journals, 1968 through 1970* Lynton Keith Caldwell, William B. DeVille, Hedvah L. Shuchman, 1968 *Engineering*, 1967 Engineers for Change Matthew Wisnioski, 2012-10-19 An account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change The engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology In Engineers for Change Matthew Wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and American life The postwar period in America saw a near utopian belief in technology's beneficence Beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford began to view technology in a more negative light Engineers themselves were seen as conformist organization men propping up the military industrial complex A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology's critics These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites And yet as Wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a

rapidly accelerating force that our institutions are ill equipped to handle The negative consequences of technology spring from its very nature and not from engineering s failures Sociotechnologists were recruited to help society adjust to its technology Wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history Fifty Years of Medieval Technology and Social Change Steven A. Walton,2019-08-22 This volume brings together a series of papers at Kalamazoo as well as some contributed papers inspired by the fiftieth anniversary of the publication of Lynn White Jr s Medieval Technology and Social Change 1962 a slim study which catalyzed the study of technology in the Middle Ages in the English speaking world While the initial reviews and decades long fortune of the volume have been varied it is still in print and remains a touchstone of an idea and a time The contributors to the volume therefore both investigate the book itself and its fate and look at new research furthering and inspired by White s work The book opens with an introduction surveying White s career with a bibliography of his work as well as some opening thoughts on the study of medieval technology in the last fifty years Three papers then deal explicitly with the reception and longevity of his work and its impact on medieval studies more generally Then five papers look at new cast studies areas where White s work and approach has had a particular impact namely medieval technology studies and medieval rural ecological studies **Nuclear Energy** Raymond L.
