Engineering as a Social Enterprise, 1991 **Reimagining Engineering Education** Caroline Baillie, Paul I.

Kadetz, 2024-10-21 This book considers a radical change to engineering education It argues for a reexamination of the traditional way in which engineering students are educated in disciplinary silos and how instead we might re imagine their professional education to more appropriately prepare students to design innovative solutions to increasingly complex global challenges It poses the question How can engineers think outside the engineers box A box that has over generations rendered engineers to be unquestioning servants of the socio political systems in which they function The book introduces a unique framework and language for engineering education which considers both the problems of the past and present and the potential solutions offered for the future By reaching out beyond the bounds of traditional knowledge and thought collectives this book will also offer a pathway for other professional education programs to explore **Engineering as a**

Global Profession Michael Davis, 2021-09-21 While this book begins with the analysis of engineering as a profession it concentrates on a question that the last two decades seem to have made critical Is engineering one global profession like medicine or many national or regional professions like law While science and technology studies STS have increasingly taken an empirical turn much of STS research is unclear enough about the professional responsibility of engineers that STS still tends to avoid the subject leaving engineering ethics without the empirical research needed to teach it as a global profession The philosophy of technology has tended to do the same This book s intervention is to improve the way STS as well as the philosophy of technology approaches the study of engineering This is work in the philosophy of engineering and the attempt to understand engineering as a reasonable undertaking *Engineering for Peace and Diplomacy* Bernard

Amadei, 2025-08-06 This book makes a compelling argument for the role of the engineering profession in advancing human development and security and its contribution to various peacebuilding and diplomatic efforts in the 21st century world How do engineers collaborate with other disciplines to deliver interventions contributing to peacebuilding and diplomatic efforts in conflict affected conflict sensitive and fragile community environments How should engineers be trained in lifelong practice to do so What principles should the engineering profession uphold while participating in peacebuilding and diplomatic initiatives How does the engineering profession serve the local and global public good The book emphasizes the importance of developing programs such as peace engineering and engineering diplomacy and training globally engaged engineers with attitudes skills knowledge and lifelong experience to address the challenges of the 21st century Engineering is not only about delivering technology It involves developing and implementing solutions that benefit people and the planet nature based solutions contribute to prosperity create partnerships and promote peace Engineers must be systems thinkers and globally involved in actively participating in sustainable development peacebuilding peacemaking peacekeeping and diplomatic efforts **Enterprise Dynamics Sourcebook** Kenneth C. Judy Cezeaux PhD Professor of Biomedical Engineering Western New England College Massachusetts USA *The Engineering-Business Nexus* Steen Hyldgaard Christensen, Bernard Delahousse, Christelle Didier, Martin Meganck, Mike Murphy, 2018-11-14 Fascinating and compelling in equal measure this volume presents a critical examination of the multilayered relationships between engineering and business In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time In the context of geopolitical economic and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor Throughout this volume the authors identify periods of alignment and periods of tension between engineering and business They look at focal points of the engineering business nexus related to the development of capitalism The book explores past and present movements to reshape reform or reject this nexus The volume is informed by questions of importance for industry as well as for higher education These are What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments How should professionals be managed to avoid a clash of managerial and professional cultures How do engineers create value in firms and corporations What kinds of tension exist between higher education and industry What challenges does the neoliberal entrepreneurial university pose for management faculty students society and industry Should engineering graduates be ready for work and can they possibly be What kinds of business issues are reflected in engineering education curricula and for what purpose Is there a limit to the degree of business hybridization in engineering degree programs and if so what would be the criterion for its definition Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking One ideal of management and control comes to the fore as the Anthropocene the world transformed into an engineered artefact which includes human existence The volume raises the question as to how engineering and business together should be considered given the fact that the current engineering business nexus remains embedded within an economic model of continual growth By addressing macro level issues such as energy policy sustainable development globalization and social justice this study will both help create awareness and stimulate development of self knowledge among practitioners educators and students thereby ultimately addressing the need for better informed citizens to safeguard planet Earth as a human life supporting system *Engineering* Unesco, 2010-01-01

Holistic Engineering Education

Domenico Grasso, Melody Burkins, 2010-03-01 Holistic Engineering Education Beyond Technology is a compilation of coordinated and focused essays from world leaders in the engineering profession who are dedicated to a transformation of engineering education and practice The contributors define a new and holistic approach to education and practice that captures the creativity interdisciplinarity complexity and adaptability required for the profession to grow and truly serve global needs With few exceptions today engineering students and professionals continue to receive a traditional technically based education and training using curriculum models developed for early 20th century manufacturing and machining While this educational paradigm has served engineering well helping engineers create awe inspiring machines and technologies for society the coursework and expectations of most engineering programs eschew breadth and intellectual exploration to focus on consistent technological precision and study Why this dichotomy While engineering will always need precise technological skill the 21st century innovation economy demands a new professional perspective that recognizes the value of complex systems thinking cross disciplinary collaborations economic and environmental impacts sustainability and effective communication to global and community leaders thus enabling engineers to consider the whole patient of society s needs The goal of this book is to inspire lead and guide this critically needed transformation of engineering education Holistic Engineering Education Beyond Technology points the way to a transformation of engineering education and practice that will be sufficiently robust flexible and systems oriented to meet the grand challenges of the 21st century with their ever increasing scale complexity and transdisciplinary nature Charles Vest President National Academy of Engineering President Emeritus MIT This collection of essays provides compelling arguments for the need of an engineering education that

prepares engineers for the problems of the 21st century Following the National Academy's report on the Engineer of 2020 this book brings together experts who make the case for an engineering profession that looks beyond developing just cool technologies and more into creating solutions that can address important problems to benefit real people Linda Katehi Chancellor University of California at Davis This superb volume offers a provocative portrait of the exciting future of engineering education A dramatically new form of engineering education is needed that recognizes this field as a liberal art as a profession that combines equal parts technical rigor and creative design The authors challenge the next generation to engineering educators to imagine think and act in new ways Lee S Shulman President Emeritus The Carnegie Foundation for the Advancement of Teaching and Charles E Ducommun Professor of Education Emeritus Stanford University

Steps toward a Philosophy of Engineering Carl Mitcham, 2019-12-06 The rise of classic Euro American philosophy of technology in the 1950s originally emphasized the importance of technologies as material entities and their mediating influence within human experience Recent decades however have witnessed a subtle shift toward reflection on the activity from which these distinctly modern artifacts emerge and through which they are engaged and managed that is on engineering What is engineering What is the meaning of engineering How is engineering related to other aspects of human existence Such basic questions readily engage all major branches of philosophy ontology epistemology ethics political philosophy and aesthetics although not always to the same degree The historico philosophical and critical reflections collected here record a series of halting steps to think through engineering and the engineered way of life that we all increasingly live in what has been called the Anthropocene The aim is not to promote an ideology for engineering but to stimulate deeper reflection among engineers and non engineers alike about some basic challenges of our engineered and engineering lifeworld

Philosophy of Engineering, East and West Carl Mitcham, Bocong LI, Byron Newberry, Baichun ZHANG, 2018-02-06 This co edited volume compares Chinese and Western experiences of engineering technology and development In doing so it builds a bridge between the East and West and advances a dialogue in the philosophy of engineering Divided into three parts the book starts with studies on epistemological and ontological issues with a special focus on engineering design creativity management feasibility and sustainability Part II considers relationships between the history and philosophy of engineering and includes a general argument for the necessity of dialogue between history and philosophy It continues with a general introduction to traditional Chinese attitudes toward engineering and technology and philosophical case studies of the Chinese steel industry railroads and cybernetics in the Soviet Union Part III focuses on engineering ethics and society with chapters on engineering education and practice in China and the West The book's analyses of the interactions of science engineering ethics politics and policy in different societal contexts are of special interest The volume as a whole marks a new stage in the emergence of the philosophy of engineering as a new regionalization of philosophy This carefully edited interdisciplinary volume grew out of an international conference on the philosophy of engineering hosted by the University of the Chinese Academy of Sciences
