Geriner, Thomas R. Gullledge, William P. Hutzler, 2012-12-06 Software Engineering Economics is a relatively new discipline that deals with all segments of the software life cycle The discipline has received much visibility in recent years because of the size and cost considerations of many software development and maintenance efforts This book places additional emphasis on the Federal Government's Information Resource Management initiative and deals with related issues such as Business Re engineering Functional Economic Analysis Organizational Process Modelling and the Economics of Reuse Analytical Methods in Software Engineering Economics Thomas R. Gullledge, William P. Hutzler, 2012-12-06 This volume presents a selection of the presentations from the first annual conference on Analytical Methods in Software Engineering Economics held at The MITRE Corporation in McLean Virginia The papers are representative of the issues that are of interest to researchers in the economics of information systems and software engineering economics The 1990s are presenting software economists with a particularly difficult set of challenges

Because of budget considerations the number of large new software development efforts is declining. The primary focus has shifted to issues relating to upgrading and migrating existing systems. In this environment productivity enhancing methodologies and tools are of primary interest. The MITRE Software Engineering Analysis Conference was designed to address some of the new and difficult challenges that face our profession. The primary objective of the conference was to address new theoretical and applications directions in Software Engineering Economics, a relatively new discipline that deals with the management and control of all segments of the software life cycle. The discipline has received much visibility in the last twenty five years because of the size and cost considerations of many software development and maintenance efforts particularly in the Federal Government. We thank everyone who helped make this conference a success especially those who graciously allowed us to include their work in this volume.

**Quantifying Software** Capers Jones, 2017-10-24. Software is one of the most important products in human history and is widely used by all industries and all countries. It is also one of the most expensive and labor intensive products in human history. Software also has very poor quality that has caused many major disasters and wasted many millions of dollars. Software is also the target of frequent and increasingly serious cyber attacks. Among the reasons for these software problems is a chronic lack of reliable quantified data. This reference provides quantified data from many countries and many industries based on about 26 000 projects developed using a variety of methodologies and team experience levels. The data has been gathered between 1970 and 2017 so interesting historical trends are available. Since current average software productivity and quality results are suboptimal, this book focuses on best in class results and shows not only quantified quality and productivity data from best in class organizations but also the technology stacks used to achieve best in class results. The overall goal of this book is to encourage the adoption of best in class software metrics and best in class technology stacks. It does so by providing current data on average software schedules, effort, costs and quality for several industries and countries. Because productivity and quality vary by technology and size, the book presents quantitative results for applications between 100 function points and 100 000 function points. It shows quality results using defect potential and DRE metrics because the number one cost driver for software is finding and fixing bugs. The book presents data on cost of quality for software projects and discusses technical debt but that metric is not standardized. Finally, the book includes some

data on three years of software maintenance and enhancements as well as some data on total cost of ownership
