Selection and Use of Engineering Materials

J A Charles, F A A Crane, 2013-10-22 Selection and Use of Engineering Materials Second Edition covers the substantial development in the selection and application of materials and of associated materials This book is organized into four parts encompassing 20 chapters that also consider the advances in materials databases and computer programs The first part deals with the motivation cost basis service requirements failure analysis specifications and quality control of engineering materials The second part describes the mechanical properties of these materials including static strength toughness stiffness fatigue creep and temperature resistance The third part examines the selection requirements for surface durability such as corrosion and wear resistance This part also explores the relationship between materials selection and materials processing as well as the formalization of selection procedures The fourth part provides some case studies in materials selection This book will prove useful to materials scientists and practicing engineers

Structural Materials José Antonio Pero-Sanz Elorz, Daniel Fernández González, Luis Felipe

Verdeja, 2019-09-25 The book covers the most important materials: natural metals, ceramics, polymers and composites to be used mainly as structural engineering materials Their main applications based on the properties are described in the first chapters of the book: mechanical, physical and chemical The second part of the book is dedicated to the conceptual design by properties for a certain structural application: stiffness, mechanical strength, toughness, fatigue resistance, creep etc taking into account the weight and the cost One of the chapters of the second part of the book is focused on the heat treatments of steels in order to improve their resistance to fatigue The book concludes with a critical comparison between materials considering their production properties and cost and the forecast about the utilization of the different fields of materials in structural applications

Selection of Engineering Materials, 2011-01-01 A key objective of any design is to define the dimensions of a component and the materials from which it is made so that it can perform a function acceptably Materials selection ultimately depends upon the performance criteria of the product that usually includes aesthetics and cost effectiveness Analyzing how a material is expected to perform with respect to requirements such as mechanical, electrical and chemical requirements can be essential to the selection process The design engineer translates product requirements into material properties Characteristics and properties of materials that correlate with performances are referred to as engineering properties Descriptor s ENGINEERING MATERIALS ENGINEERING DESIGN PRODUCTION RAW MATERIALS PRODUCT DEVELOPMENT COSTS STIFFNESS
