Intelligent Systems for Engineering Ram D. Sriram, 2012-12-06 When men of knowledge impart this knowledge I do not mean they will convince your reason I mean they will awaken in you the faith that it is so Sri Krishna Bhagavadgita BACKGROUND The use of computers has led to significant productivity increases in the engineering industry Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs However a number of problems encountered in engineering are not amenable to purely algorithmic solutions These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution An experienced engineer deals with these ill structured problems using his/her judgment and experience The knowledge based systems KBS technology which emerged out of research in artificial intelligence AI offers a methodology to solve these ill structured engineering problems The emergence of the KBS technology can be viewed as the knowledge revolution other important events that led to increased productivity are the industrial revolution 17th century the invention of the transistor and associated developments first half

of the 20th century and the world wide web towards the end of the 20th century Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions the first industrial revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected leverage our mental capabilities

Building Knowledge-Based Systems for Natural Resource Management Daniel L. Schmoldt, H. Michael Rauscher, 2012-12-06 If one were forced to use a single key word to describe the decade of the 1980 s a very prominent one would be technology Leading the forefront of tech nology advancement were breakthroughs in electronics Devices that were uncommon or unknown in 1980 became commonplace and almost indispensable by 1989 This trend has continued into the 1990 s and it does not seem to be abating in any way Microwave ovens video recorders telephone answering machines compact disc players computers and a host of smaller or less sophisticated devices now appear in most households The development of small and inexpensive computers i e personal computers has placed computing resources within reach of many more people In addition many traditional and largely mechanical devices have been enhanced by electronics For example specialized microprocessors are combined with arrays of electronic sensors to control and monitor sophisticated engineering components in most new auto mobiles In this and many other ways we are touched by the new electronics in almost every aspect of our daily lives Initially personal computers were little more than toys They contained only a small fraction of the computing power of their immediate ancestors the mini computers and mainframe computers However rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components During the same time processor speed and sophistication increased
