Harmonious Technology Pak-Hang Wong, Tom Wang, 2021-02-25 Technology has become a major subject of philosophical ethical reflection in recent years as the novelty and disruptiveness of technology confront us with new possibilities and unprecedented outcomes as well as fundamental changes to our normal ways of living that demand deep reflection of technology However philosophical and ethical analysis of technology has until recently drawn primarily from the Western philosophical and ethical traditions and philosophers and scholars of technology discuss the potential contribution of non Western approaches only sparingly Given the global nature of technology however there is an urgent need for multiculturalism in philosophy and ethics of technology that include non Western perspectives in our thinking about technology While there is an increased attention to non Western philosophy in the field there are few systematic attempts to articulate different approaches to the ethics of technology based on other philosophical and ethical traditions The present edited volume picks up the task of diversifying the ethics of technology by exploring the possibility of Confucian ethics of technology In the six chapters of this volume the authors examine various ideas concepts and theories in Confucianism and apply them to the ethical challenges of technology in the epilogue the editors review the key ideas articulated throughout the volume to identify possible ways forward for Confucian ethics of technology Harmonious Technology revives Confucianism for philosophical and ethical analysis of technology and presents Confucian ethics of technology as another approach to the ethics of technology It will be essential for philosophers and ethicists of technology who are urged to consider beyond the Western paradigms More broadly the volume will be of interest to students and scholars in the fields of philosophy science and technology studies innovation studies political science and social studies

Exploring Engineering Joe King,1997-05 **Elementary Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB** Jamal T. Manassah,2017-12-19 Engineers around the world depend on MATLAB for its power usability and outstanding graphics capabilities Yet too often engineering students are either left on their own to acquire the background they need to use MATLAB or they must learn the program concurrently within an advanced course Both of these options delay students from solving realistic design problems especially when they do not have a text focused on applications relevant to their field and written at the appropriate level of mathematics Ideal for use as a short course textbook and for self study Elementary Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB fills that gap Accessible after just one semester of calculus it introduces the many practical analytical and numerical tools that are essential to success both in future studies and in professional life Sharply focused on the needs of the electrical and computer engineering communities the text provides a wealth of relevant exercises and design problems Changes in MATLAB s version 6 0 are

included in a special addendum The lack of skills in fundamental quantitative tools can seriously impede progress in one's engineering studies or career By working through this text either in a lecture lab environment or by themselves readers will not only begin mastering MATLAB but they will also hone their analytical and computational skills to a level that will help them to enjoy and succeed in subsequent electrical and computer engineering pursuits

Computational Science and Its Applications - ICCSA 2004 Antonio Laganà, Marina L. Gavrilova, Vipin Kumar, Youngsong Mun, C.J. Kenneth Tan, Osvaldo Gervasi, 2004-05-21

The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi Italy May 14-17 2004
