Globalization and the Decline of Social Reform Gary

Teeple,2000-01-01 Globalization is the coming of the triumph of capitalism the growing ascendancy of economics over politics of corporate demands over public policy of private over public interest It represents the approaching completion of the capitalization of the world carried out by self generating capital in the form of transnational corporations within an increasingly coherent transnational regulatory regime Neo liberal policies at the national level argues the author represent the policy side of globalization the political requirements of global capital the harmonization of the national with the global They mark the transition between two eras from a world of national corporations and nation states to a world of transnational corporations and supranational regulatory agencies The author examines the postwar conditions that gave rise to the modern welfare state and the politics of social democracy throughout the industrial world He traces the transformation of these conditions in the 1970s with the coming of a computer based mode of production and the consequent necessity for global relations of production In the face of global assertions of the rights of corporate private property he makes the case that the world s subordinate classes and peoples will have to create global means of resistance *The Social Genome* Dalton

Conley,2025-03-18 A pioneering scientist presents a mind expanding account of the sociogenomics revolution which promises to upend everything we know about human development For more than 150 years the question of nature versus nurture has been one of the most contentious issues in the human sciences On the one side are blank slaters who believe we are mainly shaped by our environment On the other side are hereditarians who believe in the primacy of genes From the start the fight has been highly politicized and extremely bitter given that it has implications for how we think about racial disparities meritocracy reproduction and free will itself In *The Social Genome* pioneering scientist Dalton Conley demonstrates that this longstanding debate is fundamentally misguided The true question is not nature versus nurture but how nature and nurture interact to make each of us who we become *The Social Genome* is a sweeping account of the sociogenomics revolution which has in the last decade upended many of our notions about human development Sociogenomics brings together advances in molecular genetics and traditional social and behavioral science The key tool is the polygenic index which allows us to analyze DNA to measure a child s genetic potential Today we can estimate a child s adult height how far they will go in school and their weight as an adult all from a cheek swab finger prick or vial of saliva Conley and other researchers are using this new science to shed light on the ways in which genes shape our world influencing how each person both creates and responds to the environment around them Conley reveals a world where children s DNA influences the nurture they extract from their parents the genes of our schoolmates affect our likelihood of smoking as much as our own DNA does and spouses genes influence each other s moods and behaviors Looking forward Conley envisions a future where dating education public health and other institutions have been radically altered by the sociogenomic revolution As Conley argues we should no

longer think of nature versus nurture but about how our genes seek the nurture they need to express themselves and how in turn our environments are made partly from the genes of other people The Social Genome presents a nuanced powerful perspective on individual potential and social dynamics and raises critical ethical questions about how we will navigate a future where we have access to far more genetic information than ever before [Ulrich Beck](#) Ulrich Beck,2014-03-22 This book presents Ulrich Beck one of the world's leading sociologists and social thinkers as a Pioneer in Cosmopolitan Sociology and Risk Society His world risk society theory has been confirmed by recent disasters events that have shaken modern society to the core signaling the end of an era in which comprehensive insurance could keep us safe Due to its own successes modern society now faces failure while in the past experiments were conducted in a lab now the whole world is a test bed Whether nuclear plants genetically modified organisms nanotechnology if any of these experiments went wrong the consequences would have a global impact and would be irreversible Beck recommends ignoring the mathematical morality of expert opinions which seek to identify the level of a given risk by calculating the probability of its occurrence Instead man's fear of collapse should offer an opportunity for international cooperation and a cosmopolitan turn in the social sciences
