Endangered Birds:

Facing Extinction Paul Donald, Nigel Collar, Stuart Marsden, Deborah J. Pain, 2013-12-19 Examines extinction in birds with case studies of critically endangered species and the research initiatives designed to save them **The World's Rarest Birds** Erik Hirschfeld, Andy Swash, Robert Still, 2013-04-14 This beautifully illustrated book vividly depicts the most threatened birds on Earth It provides up to date information from BirdLife International on the threats each species faces and the measures being taken to save them Today 590 bird species are classified as Endangered or Critically Endangered or now only exist in captivity This landmark publication features stunning photographs of 515 of these species including the results of a prestigious international photographic competition organized specifically for this book This is the first time that images of many of these birds have been published It also showcases meticulously accurate illustrations by acclaimed wildlife artist Tomasz Cofta for the 75 species of which no photographs are known to exist The World's Rarest Birds has introductory chapters that explain the threats birds face in a rapidly changing world how their threat status is assessed and how this information is used to set conservation priorities Jacket **Endangered and Disappearing Birds of the Midwest** Matt Williams, 2018-08-01 From the birds who wake us in the morning with their cheerful chorus to those who flock to our feeders and brighten a gloomy winter day birds fascinate us with their lively and interesting behavior and provide essential services from controlling pest populations to pollinating crops And yet for all the benefits they provide many species across Minnesota Wisconsin Illinois Iowa Indiana Michigan and Ohio are in danger of extinction due to loss of habitat agricultural expansion changing forest conditions and interactions with humans In *Endangered and Disappearing Birds of the Midwest* Matt Williams profiles forty of the most beautiful and interesting birds who winter breed or migrate through the Midwest and whose populations are most in danger of disappearing from the region Each profile includes the current endangered status of the species a description of the bird's vocal and nesting patterns and tips to help readers identify them along with stunning color images and detailed migration maps An exquisite and timely examination of our feathered friends *Endangered and Disappearing Birds of the Midwest* is a call to action to protect these vulnerable and gorgeous creatures that enliven our world Birds in Jeopardy Paul R. Ehrlich, David S. Dobkin, Darryl Wheye, 1992-03-01 As the human population skyrockets and the toxic impact of human society spreads the natural habitats of birds degrade and diminish and the bird populations decline Two hundred years ago when the United States and Canada were home to less than 5 million people they were also home to some 650 species of birds Today more than 280 million people live there and 33 bird species have already been driven to extinction and well over 150 are in danger of extinction in all or parts of their range This book organized and written by the authors of *The Birder's Handbook* and enriched by 191 strikingly beautiful color paintings illustrating all of the birds treated is the first concise authoritative review of the status of the birds currently imperiled in the United States and Canada those that are federally listed as Endangered or Threatened and those that are listed by the National Audubon

Society as suffering local or regional or Widespread decline It also treats the birds that have been driven to extinction in the past two centuries since the stories of their somber fates can help us learn how to save the other birds that are in jeopardy Because birdwatchers and others are showing increased interest in the tropical birds that survive in Hawaii and Puerto Rico the book includes separate sections on the imperiled and extinct birds of those areas Hawaii is of special importance because it has Seen so many extinctions just in the years since Cook s arrival 23 species and subspecies it provides a laboratory for studying the impact of civilization on birds in the wild The individual texts written in clear non technical language cover requirements for successful nesting and feeding worldwide and North American breeding range wintering range and imperiled portions of range current population estimates for Threatened and Endangered birds behavioral And other factors pertinent to conservation former and or current threats associated with decline current status of imperilment federally funded recovery plans and the date of last sighting in those desperate cases where extinction is imminent or already a fact In the last century coal miners took canaries into the mines reasoning that if poisonous gases were present the birds would give warning by succumbing first Now birds are serving as miners canaries once Again In the language of ecology they are good indicator species warning us that too many people unbridled consumption of wildlands and other natural resources faulty technologies and irresponsible disposal of chemical and other wastes threaten not just birds but ourselves and every other living thing In our daily lives we seldom see the terrible effects of these forces but they are demonstrated every day by scientific surveys of the environment around the world

A is for Albatross Sharon Katz Cooper, 2016-08 Describes endangered birds of the world by assigning a species of bird related term to each letter of the alphabet Facing Extinction Paul Donald, Nigel Collar, Stuart Marsden, Debbie Pain, 2010-08-20 An authoritative study of extinction in birds with case studies of 20 critically endangered species and the research initiatives designed to save them Almost two hundred species of birds have become extinct in the past 400 years and a similar number today are in imminent danger of following them The world s conservationists are leading the fight to prevent the demise of these remaining critically endangered birds with a fair degree of success This new book examines the process and issues concerning extinction how and why it happens and what can be done about it Whilst man is to blame for many of the causes such as persecution and habitat loss species have become extinct on a regular basis since life began After several thought provoking introductory chapters the book showcases about 20 species on the brink of extinction from around the world and describes the work that is being undertaken to save them Some are success stories but a few are not This is a subject close to the hearts of all birders and ornithologists and this book written by a team of leading conservationists will strike a chord in most of them
