environmental sustainability in terms of the present state of the environment what we can do to reverse the negative trends and what the current and potential barriers are First it offers a background of the issue through a historical perspective How we got here has a lot to do with how previous generations behaved towards the environment Similarly how we behave will determine the kind of environment future generations will have to contend with It looks at the dynamics likely to impact the balance of nature Also because understanding what is biodiversity and why is it important are essential in order to grasp the concept of sustainability this report looks at the types of ecosystems that form the biosphere and brings an answer to this important question Is the Maximum sustainable yield MSY concept a fallacy Moreover the importance of cities is a key factor in environmental sustainability So the report shows the pros and cons of cities in both the preservation of the environment and the conservation of its biodiversity The social economic and political analyses use the latest data and views from experts scientists and scholars alike and also the views of the common people The result is that all three levels have positives and negatives and so none of them should be individually prioritized over the other two To tackle this dilemma the report offers an alternative an inclusive pluralistic and global approach which aims at motivating all stakeholders from rich and poor countries and people from all walks of life to work together towards a common goal and common interests Such an approach says the report should be bottom up instead of top down that is the needs of local populations especially those closer to biodiversity must come first before those of large corporations However while in the present and short terms this approach may be successful in the long term or a distant future there are reasons to be skeptical for the environment is constantly changing and generations are different from one another And that is very important because what constitutes the cornerstone of environmental sustainability is this the present use of natural resources should not be harmful to future generations Therefore the report looks into the future While acknowledging that in terms of environmental sustainability predicting the future is a daunting task because it is better to think that the future is now the report shows how we can prepare a soft landing for our great grand children by laying the groundwork for them We can accomplish this last task because we still have time

Biological Diversity L. N. Petrov, 2003 One of the cornerstones of life's wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its

conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety
