Endocrine Facets Of Ageing:

Endocrine Facets of Ageing Derek J. Chadwick, Jamie A. Goode, 2002-02-15 Social and medical developments have recently led to a dramatic increase in life expectancy. This has inspired the study of organismic changes associated with healthy ageing, in particular the erosion of homeostatic capabilities in multiple endocrine systems. This book reviews advances in the understanding of endocrine facets of ageing. It considers the relative magnitudes and time courses of different endocrine adaptations in the ageing human and experimental animal, addressing the influence of external factors on the rates of progression of endocrine sequelae in ageing, the mechanisms that underlie the disarray of endocrine axes in ageing, and the implications of therapeutic reconstitution of hormones in ageing. This book considers the mechanisms of ageing and hormonal changes that occur with age. Discusses healthy ageing and the relationships between hormonal changes and pathophysiological conditions such as atherosclerosis and age-related bone loss. Draws together contributions from basic and clinical research to identify and stimulate promising new research directions.

Endocrinology of Aging Emiliano Corpas, Marc R. Blackman, Ricardo Correa, S. Mitchell Harman, Antonio Ruiz-Torres, 2020-09-25 According to the United Nations, the number of people aged 60 years or over in the world is projected to be 1.4 billion in 2030 and 2.1 billion in 2050. Endocrinologists and other clinicians face the challenge of caring for the elderly. To do so, they need to incorporate geriatric principles into their clinical practice. *Endocrinology of Aging: Clinical Aspects in Diagrams and Images* presents chapters in a way that allows the reader to incorporate concepts and main facts of complex subjects in a visual way. As the global population becomes older, the need for a deeper understanding of geriatric pathology increases, and with it, the access to educational resources for the endocrinology and metabolism of aging. Chapters are divided according to specific endocrine and metabolic systems, providing evidence-based content regarding what is known about the function of endocrine and metabolic systems altered during the aging process. Addresses physiological changes that alter the pathophysiology of the clinical picture, explaining the characteristic pathological expressions of hormonal and metabolic disorders in the advanced age. Editors and authors are clinical endocrinologists, geriatricians, internists, and endocrine surgeons with extensive global experience in clinical and experimental gerontology. Considers the patient transitioning from young adult to elderly, discussing the endocrinological challenge to discern physiology from pathology. Focuses on age as an essential factor for diagnostic and endocrine management. Includes many pictures and diagrams, making it a user-friendly reference guide for practicing physicians.

Health Aspects of Aging Gari Lesnoff-Caravaglia, 2007 This second edition of *Health Aspects of Aging* serves to broaden the perspectives of societal change due to increases in life expectancy, as well as the effects of age-related changes as they impinge upon the provision of health care for older persons. The growing presence of a large number of persons aged 65 and older worldwide has propelled a re-evaluation of the nature of life that is protracted to 100 years and beyond. The emphasis in this second edition is to replace the prevailing problem approach to aging by a problem-solving

approach The problem solving approach of this volume has allowed for the incorporation of the concept of new social structures and the development of intervention and prevention strategies along with new technologies Such new products and health care measures include those that are deliberately aimed to offset debilities due to normal age changes the onslaught of diseases incongruous environments and altered social states Such a multi disciplinary perspective underscores the fact that aging permeates not only biological systems but clinical medicine economics ethics and the very fabric of society The chapters in this volume address these issues from the standpoints of diverse disciplines and professional positions Since biological changes are primary issues the aging process is largely described from the perspective of biological changes related to age and to particular dysfunctions The environmental features and the potential introduction of technological interventions are interspersed within chapters as well as finding primary focus in particular chapters The maturity of the technology described in the chapters varies from devices and systems that are nearly ready to be marketed to concepts and prototypes that are still in the design and developmental stages in the laboratory The relationship between the provision of appropriate health care and the responsible utilization of technologies as described in this volume will serve to enhance the nature of life extension

The Neuroendocrine Immune Network in Ageing R.H. Straub,Eugenio

Mocchegiani,2004-07-24 The book describes the mechanisms involved in the maintenance of neuroendocrine immune interactions in ageing The lack of this maintenance leads to the appearance of age related diseases cancer infections dementia and subsequent disability The capacity of some hormones or nutritional factors in restoring and remodelling the neuroendocrine immune response during ageing is reported presenting possible new anti ageing strategies in order to reach healthy ageing and longevity

Cellular and Molecular Aspects of Ageing Valquiria Bueno, 2024-03-26 Even though life expectancy increased in the last decades ageing has been considered a strong risk factor for age related diseases disability and death The further understanding of cellular and molecular aspects of ageing could predict the onset of diseases in advance prevent functional decline and identify targets for interventions focused in healthy ageing The hypothesis that organismal ageing and dysfunction is influenced by the accumulation of senescent cells had origin in Hayflick and Moorhead results from cultured human fibroblasts It was shown that fibroblasts presented a limited capacity for proliferation reaching thus the state of irreversible growth arrest replicative senescence In 2011 van Deusen et al showed that p16Ink4a accumulation was associated with premature ageing in a mouse model and the inactivation of the p16Ink4a gene mitigated the ageing phenotype Thus the cell cycle arrest due to the expression of p16Ink4a and p21CIP cell cycle inhibitors is the main characteristic of senescence In addition to cellular senescence the hallmarks of ageing include genomic instability

telomere shortening epigenetic alterations loss of proteostasis deregulated nutrient sensing mitochondrial dysfunction stem cell exhaustion altered intercellular communication and a pro inflammatory senescence associated secretory phenotype SASP In this book researchers will comprehensively discuss relevant changes occurring at cellular and molecular levels human and animal models based on the hallmarks of ageing The impact of lifestyle and benefits of physical activity and nutrition will be also discussed Unravelling cellular and molecular aspects of ageing is crucial for the unanswered questions about ageing and for guiding interventions such as changes in lifestyle senolytic kills senescent cells and senomorphic interrupts deleterious intercellular communication therapies

The Aging Body Susan Krauss Whitbourne, 2012-12-06 The objective of this book is to provide information that will be useful to people in a variety of disciplines who wish to learn more about normal aging processes in the human body Although gerontologists in the biological sciences are making great strides in research on human aging and documenting this work in monographs texts and review chapters this information is generally not easily accessible nor is it comprehensible to nonprofessionals in these fields This book is intended to provide a summary of this work along with its implications for psychological functioning of the aging individual The majority of the book is devoted to describing the results of research on the physiological changes in the human body with aging and to seeking explanations for these age effects This description has been approached in such a way as to make it readable for the nonspecialist but also to focus on research issues that will be useful reading for those who are currently working in these particular areas In addition throughout the book I have tried to develop some themes regarding physiological and psychological adaptation during adulthood
