*Heterogeneous Agent Systems* V. S. *Principles of Noology* Seng-Beng Ho, 2016-06-29 The idea of this book is to establish a new scientific discipline noology under which a set of fundamental principles are proposed for the characterization of both naturally occurring and artificial intelligent systems The methodology adopted in Principles of Noology for the characterization of intelligent systems or noological systems is a computational one much like that of AI Many AI devices such as predicate logic representations search mechanisms heuristics and computational learning mechanisms are employed but they are recast in a totally new framework for the characterization of noological systems The computational approach in this book provides a quantitative and high resolution understanding of noological processes and at the same time the principles and methodologies formulated are directly implementable in AI systems In contrast to traditional AI that ignores motivational and affective processes under the paradigm of noology motivational and affective processes are central to the functioning of noological systems and their roles in noological processes are elucidated in detailed computational terms In addition a number of novel representational and learning mechanisms are proposed and ample examples and computer simulations are provided to show their applications These include rapid effective causal learning a novel learning mechanism that allows an AI noological system to learn causality with a small number of training instances learning of scripts that enables knowledge chunking and rapid problem solving and learning of heuristics that further accelerates problem solving Semantic grounding allows an AI noological system to truly understand the meaning of the knowledge it encodes This issue is extensively explored This is a highly informative book providing novel and deep insights into intelligent systems which is particularly relevant to both researchers and students of AI and the cognitive sciences

Artificial War: Multiagent-based Simulation Of Combat Andrew Ilachinski, 2004-06-14 Military conflicts particularly land combat possess the characteristics of complex adaptive systems combat forces are composed of a large number of nonlinearly interacting parts and are organized in a dynamic command and control network local action which often appears disordered self organizes into long range order military conflicts by their nature proceed far from equilibrium military forces adapt to a changing combat environment and there is no master voice that dictates the actions of every soldier i e battlefield action is decentralized Nonetheless most modern state of the art military simulations ignore the self organizing properties of combat This book summarizes the results of a multiyear research effort aimed at exploring the applicability of complex adaptive systems theory to the study of warfare and introduces a sophisticated multiagent based simulation of combat called EINSTEIN EINSTEIN whose bottom up generative approach to modeling combat stands in stark contrast to the top down or reductionist philosophy that still

underlies most conventional military models is designed to illustrate how many aspects of land combat may be understood as self organized emergent phenomena Used worldwide by the military operations research community EINSTEIN has pioneered the simulation of combat on a small to medium scale by using autonomous agents to model individual behaviors and personalities rather than hardware **Sun Tzu The Technology of War** Sun Tzu, Colin I. Thorne, 2012-07-01 Is another translation of Sun Tzu really needed Yes it is What kind of translation would this be then It would be one which the reader did not have to guess at the meaning of what Sun Tzu said In other words it would be a translation which was not inscrutable in part or in whole but completely understandable It would not be a translation which made the reader feel as though he or she did not have the ability to grasp Sun Tzu's ideas It would not be a translation which made the reader wonder if he or she was applying it correctly Rather it would be a translation one could understand and use readily **Sun Tzu The Technology of War** is the book which finally allows Sun Tzu to be fully understood and correctly applied It is doubtful that any English translation of Sun Tzu is based upon more years of research than **Sun Tzu The Technology of War** Ten years went into the research and translation of this book Each character was meticulously investigated Warfare of Sun Tzu's era and earlier eras were researched based upon what Sun Tzu mentions of the skill of warriors of ancient times in order to understand what Sun Tzu had observed of warfare and then codified into his laws rules and methods of war This is not another translation based upon someone else's translation This translation has no other source than the wisdom of Sun Tzu **Psychoanalytic Defense Mechanisms in Cognitive Multi-Agent Systems** Friedrich Gelbard, 2017-05-18 Human cognitive processes and defense mechanisms as described in psychoanalysis bring about new notions and paradigms for artificial intelligence systems One key reason is that the human cognitive processes and defense mechanisms in question can accomplish conflict detection functionalities filter functionalities and other system stabilizing tasks within artificial intelligence systems Yet artificial cognitive architectures lack the capability to analyze complex situations as well as the universal competencies needed to orientate themselves in complex environments in various domains **Psychoanalytic Defense Mechanisms in Cognitive Multi Agent Systems** addresses this dilemma by exploring how to describe model and implement psychoanalytic defense mechanisms in the course of a project that provides a functional model of the human mind With discussions focusing on the development of a mathematical description for the implementation of conflict detection the activation and selection of defense mechanisms and the processing of defense mechanisms **Psychoanalytic Defense Mechanisms in Cognitive Multi Agent Systems** describes the decisive points for the application of defense mechanisms in artificial intelligence Formulae that treat defense mechanisms as transformations are also provided Interdisciplinary cooperation between the scientific fields of psychoanalysis and artificial intelligence is highlighted as the foundation of new research findings throughout the book Innovative and exciting this book will be of great interest to academics researchers and postgraduates in the fields of cognitive science artificial intelligence and psychoanalysis **Endocrine Evaluation** Ian Ramsey, 2006 **KGB Lexicon**
