Energizing China:

Energizing China Michael B. McElroy, Chris P. Nielsen, Peter Lydon, 1998 The text is part of an ongoing programme of Harvard China research collaboration **Energy Policy and Regulation in the People's Republic of China** C. P. Andrews-Speed, 2004-01-01 China is the world's second largest consumer of commercial energy and is therefore a significant contributor to atmospheric pollution It is becoming a major player in global and regional markets for energy products services and investment This book provides an overview of the formulation and implementation of energy policy in China Part One provides background information on China's energy sector Part Two examines the nature of China's energy policy and of the policy making process with examples drawn from the coal and natural gas sectors as well as from the government's drive to promote energy conservation and energy efficiency Part Three focuses on recent efforts to reform the energy sector in China and to regulate it more effectively paying particular attention to the electrical power sector and to small scale coal mines Part Four evaluates from the perspective of the citizen policy relating to the electrical power sector and to the closure of small scale coal mines Part Five addresses the international dimensions of China's energy policy with accounts of both inward and outward investment and of the international political implications About the author Dr Philip Andrews-Speed is Director of the Centre for Energy Petroleum and Mineral Law and Policy at the University of Dundee Scotland He spent fourteen years as a geologist in the international mining and petroleum industries before coming to the Centre in 1994 gaining an LLM in Energy Law and Policy and joining the academic staff **China's Search for Energy Security** Suisheng Zhao, 2014-06-11 China's rapid economic growth in the recent decades has produced an unprecedented energy vulnerability that could threaten the sustainability of its economic development a linchpin to social stability and ultimately the regime legitimacy of the Chinese Communist Party CCP as well as the foundation for China's rising power aspirations What is the Chinese perception of the energy security and challenges how has the Chinese government responded to the challenges What are the international implications of China's search for energy security This collection of contributions by leading scholars seeks answers to these extremely important questions The book is divided into three parts Part I presents an overview of China's sense of energy security and its strategic responses Part II examines China's energy policy making processes the efforts to reform and reorganize the energy sector and reset policy priorities Part III focuses on the international implications of China's search for energy security This book consists of articles published in the Journal of Contemporary China *China as a Global Clean Energy Champion* Philip Andrews-Speed, Sufang Zhang, 2019-01-07 This book assesses China's reputation as a global clean energy champion and applies institutional and public policy theories to explain how the country has achieved so much and why there continue to be so many unintended consequences and constraints to progress It considers the extent to which the government has successfully boosted the manufacture and deployment of low carbon electricity generating infrastructure cleaned up thermal power generation and enhanced energy

efficiency dramatically constraining China's rising carbon dioxide emissions but also examines the substantial political and financial capital required to reinforce the predominantly administrative policy instruments and the mix of special interests and poor coordination that are endemic to the energy sector. Arguing that the current approach seems to be encountering ever diminishing returns, the book considers whether ongoing sector reforms and the new national emissions trading scheme can reinvigorate the nation's clean energy trajectory.

Integrated Assessment of Sustainable Energy Systems in China, The China Energy Technology Program B. Eliasson, Y. Lee, 2012-12-06 The purpose of the China Energy Technology Program CETP has been to take a holistic view of electricity generation in China with special emphasis on the economic and environmental impact of technology. The program is a collaborative effort involving industry as leader and manager of the program, researchers from academia and national research institutes and the stakeholders, users or planners of the electricity market. A power plant, no matter of what kind, is not a solitary unit which may be considered independently from its environment. Modern society has been built on easy access to power; it is now asking for environmentally clean power. Clean power is the pathway that will lead to sustainability, an extension of the concept of an environmentally clean future. Progress toward a sustainable technical solution must include an evaluation of the environmental, economic and societal impact of electrical power generation. To achieve the goals of the CETP program, we wanted to go beyond what had been done in similar programs in the past. Its organizers wanted the program not only to evaluate the overall impact of electricity generation but also do it in such a way that program results could be applied and adapted to different circumstances, including countries other than China. For this purpose, we have developed a methodology and presented it on a DVD disc which the reader will find inside the back cover of this book. The methodology is conceived to allow insights into the function of the program on various levels.

Energy Management for Sustainable Development Soner Gokten, Guray Kucukkocaoglu, 2018-08-01 We are more aware of the need to achieve sustainable development than ever before. It is fair to say that two of the most important factors affecting sustainability are the ways of both producing and using energy. In this sense, this book provides a forum to articulate and discuss energy management issues in the frame of achieving sustainable development. And undoubtedly, we are also deeply concerned about these issues in the recent times. This volume contains 6 chapters and is organized into three sections: Policies and Strategies, Technologies and Industries.

China's Energy Security Giulia C. Romano, Jean-Francois Meglio, 2016-06-10 A secure supply of energy is essential for all nations to sustain their economy and indeed their very survival. This subject is especially important in the case of China as China's booming economy and consequent demand for energy is affecting the whole world and in turn potentially driving realignments in international relations. Moreover, as this book argues, energy security should be considered more broadly to include issues of sustainability, environmental protection and the domestic organisation of energy policy and energy supply. This book presents a comprehensive picture of China's energy security. It covers all energy sectors: coal, oil, gas, renewables, international relations.

with all major sources of energy supply the Middle East Central Asia Africa and key areas of domestic policy making and supply

Asian Energy Markets The Emirates Center for Strategic Studies and Research, 2004-08-23 Energy has become a crucial determinant shaping the security environment of Asia The continent s phenomenal growth is projected to raise oil and gas consumption to dramatic new levels As major Asian nations become net energy importers this thirst for oil will determine world energy export patterns and shape regional geopolitics With the Arabian Gulf supplying the major proportion of Asian energy needs Gulf Asia links will emerge as a key factor in the global energy scenario Energy security concerns will dominate Asian economic policy and strategic decision making and spur Asian investment in oil exploration oil refining and development of alternative energy sources What are the economic and strategic implications of Asia s growing dependence on Gulf oil How far can Asian countries counter such dependence by improving energy efficiency and developing new sources What are the energy transitions that Asian nations are undergoing What kind of structural reforms are needed in the Asian energy markets What are the implications of Asian energy consumption trends and current economic reforms for the Arabian Gulf producers What will the impact of Asian markets be on the global energy scenario These and related issues were examined by energy experts at the Seventh Annual Energy Conference held in Abu Dhabi from January 13 14 2002 This volume of conference presentations discusses wide ranging issues relating to the Asian energy sector including supply security consumption trends privatization moves energy diversification energy self sufficiency and foreign investment

China's Energy Needs and Strategies U.S.-China Economic and Security Review Commission, 2003 Contains testimony and prepared statements by various experts as well as remarks by members of the Commission

China's Global Energy Expansion Xiaohan Gong, 2024-10-03 Should Chinese energy investments be excluded from the liberal economic system based on geopolitical assessments only This book explores the

potential regulatory control by the Chinese government over foreign energy investments to achieve their perceived strategic objectives. Host states in which Chinese energy companies make investments have increasingly opposed Chinese energy investments in their national security reviews based on concerns that these investments have strategic objectives. The book analyses China's investment-related law, regulations, and energy policies to examine how overseas energy investment making is governed. The book also explores the role of the Chinese government in energy investment promotion and protection. Uniquely, the examination of China's potential regulatory control provides an objective criterion rather than geopolitical considerations for host states to assess the nature of Chinese energy investments. The book helps readers to open the black box of Chinese energy investments from a regulatory perspective. It is a useful resource for researchers as well as practising lawyers assisting their Chinese clients through national security reviews or when trying to determine whether China's SOEs can bring cases before investor-state arbitration tribunals. *China's Energy Outlook 2004* Wenying Chen, Maosheng

It discusses different aspects on how China may maintain its fast economic growth through good management of energy consumption and development of various energy sources. *Security and Profit in*

China's Energy Policy Øystein Tunsjø, 2013-11-19. China has developed sophisticated hedging strategies to insure against risks in the international petroleum market. It has managed a growing net oil import gap and supply disruptions by maintaining a favorable energy mix, pursuing overseas equity oil production, building a state-owned tanker fleet, and strategic petroleum reserves, establishing cross-border pipelines, and diversifying its energy resources and routes. Though it cannot be secured, China's energy security can be insured by marrying government concern with commercial initiatives. This book comprehensively analyzes China's domestic, global, maritime, and continental petroleum strategies and policies, establishing a new theoretical framework that captures the interrelationship between security and profit. Arguing that hedging is central to China's energy security policy, this volume links government concerns about security of supply to energy companies' search for profits and by drawing important distinctions between threats and risks, peacetime and wartime contingencies, and pipeline and seaborne energy supply routes, the study shifts scholarly focus away from securing and toward insuring an adequate oil supply and from controlling toward managing any disruptions to the sea lines of communication. The book is the

most detailed and accurate look to date at how China has hedged its energy bets and how its behavior fits a hedging pattern
