Energy Wealth And Governance In The Caucasus And Central Asia Lessons Not Learned:

Energy, Wealth and Governance in the Caucasus and Central Asia Richard Auty, Indra de Soysa, 2006-08-21 Drawing upon recent progress in development economics and political science the book provides fresh analysis of the Caucasus and Central Asia CCA countries transition to a market economy by tracing the impact of natural resource endowment The book examines the synergies between energy rich and energy poor states and highlights the practical consequences of both well managed and poorly managed deployment of energy Featuring contributions from prominent specialists on resource driven economies the book argues that unless CCA elites change the way in which they deploy natural resource revenues regional development will fall short of its potential with possible disastrous consequences The contributors apply the experience of the developing market economies to demonstrate that the region still holds considerable potential to become an important stable supplier of raw materials and a source of industrial demand to the global economy However the CCA is equally likely to become a threat to the global economy as a consequence of the misuse of energy revenues to promote the interests of predatory political elites

The Governance of Energy Megaprojects Benjamin K. Sovacool, C. J. Cooper, 2013-07-01 Benjamin Sovacool and Christopher Jon Cooper have produced an astonishing and well written book based on extensive original research in twelve countries They explore the technical social political and economic dimensions of four energy megaprojects The large scale of megaprojects always appears to complicate the decision making process and often causes failures Megaprojects may even reinforce corruption and erode democracy It highlights that today's experiences can be explained by statements by Aristotle and Einstein who argue both in their own way that it is always wise to take the limits of size into account and to reduce the size of projects wherever this is possible For everybody involved in megaprojects this book must be read Hugo Priemus Delft University of Technology The Netherlands Based on extensive original research this book explores the technical social political and economic dimensions of four Asian energy megaprojects a regional natural gas pipeline network in Southeast Asia a series of hydroelectric dams on the island of Borneo an oil pipeline linking Europe with the Caspian Sea and a very large solar energy array in the Gobi desert This book investigates why energy megaprojects fail to deliver their promised benefits It offers the first comprehensive assessment of the complicated dynamics driving and constraining megaprojects initiated in the rapid scramble for energy resources and efforts to improve energy security The authors approach the assessment of megaprojects from a socio technical angle emphasizing broad issues of political leadership regulation financing interest group opposition and environmental impact as well as conventional technological factors such as engineering design and project management The Governance of Energy Megaprojects will prove insightful for academics concerned about energy policy energy security environmental impact and technology assessment But the book should prove equally compelling to those engaged in the practical management and implementation of large scale energy projects anywhere in the world

Aleprete Jr., 2013-07-19 While the international system has been evolving in an increasingly liberal direction the level of democratic practice within the post Soviet region has on the whole declined Two decades after the popular uprisings against communism many governments in the region have successfully blunted both popular and international pressures for democratic consolidation Each selection in this volume explores how international factors interact with domestic conditions to explain the persistence of authoritarianism throughout the region The selections in the volume cover several countries including Azerbaijan Kazakhstan Uzbekistan

South Ossetia Ukraine Moldova and Belarus special attention is paid to the Russian Federation since it is both a member of the region and acts as an external actor influencing the political development of its neighbors This volume is especially relevant as the world again experiences the surprising overthrow of long running authoritarian regimes The failure of democratic consolidation among post Soviet states offers important lessons for policymakers and academics dealing with the recent wave of political transitions in the Middle East and Asia *The History of the Central Asian Republics* Peter L. Roudik, 2007-10-30 Central Asia's long and complicated history is teeming with diverse cultures and traditions The nations of Kazakhstan Kyrgyzstan Tajikistan Turkmenistan and Uzbekistan have served as a major cultural crossroad throughout the millennia with many customs colliding and blending along the way In this comprehensive volume students can learn how Central Asia developed in ancient times and how the nations of the steppes evolved through the Middle Ages into modern history From the Silk Road to Russian colonization to Soviet rule Central Asia's ever changing nations continue to play an important role in international society today This volume is the perfect addition to any high school public or undergraduate library

Sustainable Energy in Kazakhstan Yelena Kalyuzhnova, Richard Pomfret, 2017-07-06 Kazakhstan is rich in natural resources including coal oil natural gas and uranium and has significant renewable potential from wind solar hydro and biomass In spite of this the country is currently dependent upon fossil fuels with coal fired plants accounting for 75% of total power generation leading to concerns over greenhouse gas emissions and impacts on human health and the environment This book analyses the implications of the global shift to cleaner energy for a country whose economy has centred on hydrocarbon exports The challenge is urgent for Kazakhstan whose recent economic growth has driven increased demand for energy services making the construction of additional generating capacity increasingly necessary for enabling sustained growth In this context renewable energy resources are becoming an increasingly attractive option to help bridge the demand supply gap Chapters written by experts in the field provide a comprehensive review of the current energy situation in Kazakhstan including fossil energy and renewable resources and analyses policy drivers for the energy sector Emphasising that clean energy covers a variety of renewables as well as cleaner use of hydrocarbons this book argues that future technological change will affect the relative attractiveness of the various choices Recognising technical geographical and domestic and international political constraints on policymakers options this book will be of interest to an interdisciplinary audience in the fields of resource management and clean energy development economics and Central Asian Studies
