Farret, M. Godoy Simoes, 2006-04-20 A unique electrical engineering approach to alternative sources of energy Unlike other books that deal with alternative sources of energy from a mechanical point of view Integration of Alternative Sources of Energy takes an electrical engineering perspective Moreover the authors examine the full spectrum of alternative and renewable energy with the goal of developing viable methods of integrating energy sources and storage efficiently Readers become thoroughly conversant with the principles possibilities and limits of alternative and renewable energy The book begins with a general introduction and then reviews principles of thermodynamics Next the authors explore both common and up and coming alternative energy sources including hydro wind solar photovoltaic thermosolar fuel cells and biomass Following that are discussions of microturbines and induction generators as well as a special chapter dedicated to energy storage systems After setting forth the fundamentals the authors focus on how to integrate the various energy sources for electrical power production Discussions related to system operation maintenance and management as well as standards for interconnection are also set forth Throughout the book diagrams are provided to demonstrate the electrical operation of all the systems that are presented In addition extensive use of examples helps readers better grasp

how integration of alternative energy sources can be accomplished The final chapter gives readers the opportunity to learn about the HOMER Micropower Optimization Model This computer model developed by the National Renewable Energy Laboratory NREL assists in the design of micropower systems and facilitates comparisons of power generation techniques Readers can download the software from the NREL Web site This book is a must read for engineers consultants regulators and environmentalists involved in energy production and delivery helping them evaluate alternative energy sources and integrate them into an efficient energy delivery system It is also a superior textbook for upper level undergraduates and graduate students *Alternative Energy Technologies* Robert N. response to the increasing interest in the Renewable Energy industry which can be seen as an important remedy to many environmental problems that the world faces today. The multiplicity of criteria and the increasingly complex social, economic, technological, and environmental scenario makes multi-criteria analysis a valuable tool in the decision-making process for fossil fuel substitution. The detailed chapters explore the use of the Multi-criteria decision-making methods and how they provide valuable assistance in reaching equitable and acceptable solutions in the selection of renewable energy projects. Common multi-criteria decision-making methods including Analytical Hierarchy Process, PROMETHEE, ELECTRE, TOPSIS, and VIKOR are explored in detail, with an application case of each method included at the end of each chapter. As such, Multi-Criteria Analysis in the Renewable Energy Industry is an ideal resource for those groups of individuals, institutions, and administration such as local authorities, academic institutions, environmental groups, and governments that through their priorities and evaluation systems have interests at stake and directly or indirectly influence the decision-making process.
