

# Eight Pillars of Energy Economics

## Energy taxation:

Imposition of taxes or fees on the production, consumption, or trade of energy. Energy taxes can be used to generate money, remedy market failures, redistribute income, and accomplish other governmental goals.

## Energy demand:

The quantity of energy that customers are willing and able to buy at a given price and time. Income, prices, preferences, technology, and weather all influence energy demand.

## Energy subsidies:

Financial or in-kind assistance to energy producers, consumers, or traders. Energy subsidies can be used to reduce energy costs, increase energy security, aid economic development, or stimulate the use of cleaner energy sources.

## Energy supply:

The quantity of energy that producers are willing and able to supply at a particular price and time. The availability of resources, the cost of extraction, technology, and laws all influence energy supply.

## Energy security:

A country's or region's capacity to access sufficient, reliable, and inexpensive energy sources to meet its energy needs. Energy security is influenced by elements such as energy diversification, import reliance, geopolitical concerns, and infrastructure resilience.

## Energy markets:

Platforms where energy buyers and sellers engage to decide energy prices and amounts transferred. There are several forms of energy markets, including oil, gas, coal, electricity, and renewable energy markets.

## Energy policy:

The set of rules, laws, strategies, and actions that regulate and influence the energy sector. Governments, international organizations, industry, civil society, and consumers can all create and implement energy policy.

## Energy pricing:

The procedure for determining the monetary worth of energy products and services. Market pressures, government policies, social and environmental considerations, and other variables can all have an impact on energy cost.
