WENK, C., and M. BOESSINGER. *Energy Metabolism of Farm Animals. Proceedings of the 12th Symposium*. 1991. Institut für Nutztierwissenschaften, Zurich, Switzerland. 488 pp., SFr. 70.00.

Since 1958, there has been a symposium about this topic every 3rd yr. The 1991 proceedings contain 108 presentations, 13 of these using avian species for their research.

The symposium was organized into five sessions: organ and tissue metabolism; growth; new methods and aspects of current methodology; reproduction and lactation; and maintenance, environment, and other factors. In the first section, several papers dealt with nutrient supply and use by the liver and gastrointestinal tract. These organs are only a small fraction of body weight but account for a substantial fraction of metabolism. Sodium and potassium adenosine triphosphatase was the subject of several other studies, because of this enzyme's contribution to metabolism.

A second session examined several variables related to dietary energy that may affect growth. An animal's ability to efficiently use ME from various carbohydrate and fat sources was reported. Several papers addressed the effects of growth promoters (clenbuterol and somatotropin) on energy requirements and metabolism. Efficiency of energy use as affected by age, species of animal, and nutritional status was discussed.

The third session, "New Methods and Aspects of Current Methodology," concentrated on two techniques. One was the application of nuclear magnetic resonance (NMR) to research with animals. This technique may be useful for determining the approximate body composition of an animal that is anesthetized. More specific applications might estimate blood flow or follow phosphate metabolism in tissues. A second technique was the use of doubly labeled water for studying energy metabolism. If NMR techniques are successful, tissues and procedures of the live animal

can be studied, instead of studying them following death. Doubly labeled water can provide information about energy metabolism that previously required more laborious calorimetry.

A session on reproduction and lactation had little information that was applicable to poultry science. The fifth session on "Maintenance, Environment, and Other Factors" raised at least one issue that is important for all species. Genetic selection has produced lines of poultry that have high or low maintenance requirements for energy. Those that have a high requirement are more active physically and produce more heat. The merits of a component for low maintenance requirement in the selection index were discussed.

The greatest value of such a book is that it simplifies the task of staying current. Reports from those considered leaders in energy metabolism indicate the latest thinking about the related topics. That is adequate justification for having a recent book about such an economically important research area in the library.

MCDOWELL, L. R. *Minerals in Animal and Human Nutrition*. 1992. Academic Press, Inc. Harcourt Brace Jovanovich, Publishers, 1250 Sixth Avenue, San Diego, CA 92101. 524 pp., hardcover. \$99.00.

The purpose of the book as stated by the author was to provide a comprehensive college text book and reference source that contained current information on mineral nutrition. In the reviewer's opinion, the author did that. The book contains over 500 pages of up-to-date information on mineral nutrition for livestock and poultry and discusses comprehensive aspects for laboratory animals and human nutrition. It was quite a challenge for the author to cover livestock, poultry, laboratory animals, and humans in one book, but he has done an excellent job in reviewing and condensing the literature.

Oxygen and Living Processes D.L. Gilbert, 2012-12-06 The field of oxygen study is immense No single work on the subject can be comprehensive and this volume makes no such claim Indeed coverage here is selective and the selection is somewhat personal However the choice of topics is vast There are chapters on the history of oxygen oxygen in the universe the biochemistry of oxygen and clinical uses of oxygen An alternate title could have been Some things you always wanted to know about oxygen but didn't know where to find them easily Some information in this wide ranging work can not be found elsewhere This book is intended not only for specialists but also for nonspecialists engaged in or curious about any field of oxygen study particularly if they wish to know more about other fields of oxygen Thus those who are interested in oxygen and are historians astronomers chemists geochemists evolutionists biochemists physiologists pathologists or clinicians will find here much of extreme value It is intended to be read and understood at the graduate or advanced undergraduate level This volume is divided into four parts The first constitutes the background for Parts II and III and the last integrates the preceding material with an overall perspective on oxygen in living organisms
