Energy Shock:

Energy Price Shocks and Macroeconomic Performance Douglas R. Bohi, 2017-02-17 The oil price shocks of the 1970s led to severe recessions in the 1980s in the United States Originally published in 1989 in the aftermath Bohi attempts to show both how energy prices can cause a decline in output and employment and to explore important other factors which led to the recessions using the US United Kingdom Japan and Germany as examples The findings in *Energy Price Shocks and Macroeconomic Performance* have major implications for energy policy and questions government plans which focus solely on preventing another oil supply disruption This title will be of interest to students of environmental studies and economics as well as professionals

Euro Area Inflation After the Pandemic and Energy Shock: Import Prices, Profits and Wages Mr. Niels-Jakob H Hansen, Niels-Jakob Hansen, Frederik Toscani, Mr. Frederik G Toscani, Jing Zhou, 2023-06-23 We document the importance of import prices and domestic profits as a counterpart to the recent increase in euro area

inflation Through a novel consumption deflator decomposition we show that import prices account for 40 percent of the average change in the consumption deflator over 2022Q1 2023Q1 while domestic profits account for 45 percent The increase in nominal profits was largest in sectors benefiting from increasing international commodity prices and those exposed to recent supply demand mismatches While the results show that firms have passed on more than the nominal cost shock and have fared relatively better than workers the limited available data does not point to a widespread increase in markups Looking ahead assuming nominal wage growth of around 4 5 percent over 2023 24 slightly below the level seen in Q1 2023 and broadly unchanged productivity a normalization of the profit share to the average level over 2015 19 will be necessary to achieve a convergence of inflation to target over the next two years Monetary policy will thus need to remain restrictive to anchor expectations and maintain subdued demand such that workers and firms settle on relative price setting that is consistent with disinflation
