Energy Statistics:

Energy Statistics William F. Gay, 1976 *Energy Statistics*, 1973 **Energy Statistics** United States. Congress. Joint Economic Committee. Subcommittee on Priorities and Economy in Government, 1974 Energy Statistics John Denman, Mieke Reece, Sohbet Karbuz, 2001-03-07 Rising global demand for adequate and reliable energy supplies makes the availability of energy statistics indispensable for formulating national energy policy and ensuring that the energy market functions effectively An unregulated energy market does not automatically produce reliable objective and timely statistical data that will ensure its transparency since no single enterprise can bear the costs of maintaining a complex data system It is therefore incumbent on state authorities to collect verify and disseminate energy market statistics This study highlights the key role and methodology of the International Energy Agency in the field of energy statistics The Statistics Division of the IEA plays a predominant role as it collects verifies and publishes information on energy from both OECD member countries and non member countries Data gathering from member countries is undertaken through established reporting systems For non member countries and international organizations the customary mode for data collection is through bilateral exchange cooperation agreements or personal contacts An important task for the Statistics Division is to disseminate data which is done through publications electronic data and the Internet The underlying reasons for gathering energy data and the means of collection are examined with the UK and United States serving as case studies The authors outline the legislation relating to the collection of energy statistics which indicates the level of government intervention in economic affairs A corresponding issue is the degree of statistical confidentiality The classification of data is examined in detail for all products and all flows or uses of the energy The treatment and verification process for data received by OECD member and non member countries is also demonstrated Finally guidelines are provided regarding the construction of a commodity balance the conventions of an energy balance as well as the IEA energy balance format which facilitates both cross fuel and cross country comparisons

Energy Statistics United States. Congress. Senate. Committee on Finance, 1975 *Digest of United Kingdom energy statistics 2010* Great Britain: Department of Energy and Climate Change, Iain MacLeay, 2010-07-29 This issue of the Digest of United Kingdom Energy Statistics DUKES is part of a series and updates the figures given in the DUKES 2009 The publication consists of seven chapters the first chapter deals with overall energy with the other chapters covering specific fuels combined heat and power and renewable sources of energy The statistics presented in this digest will generate widespread interest from anyone working within or with an interest in energy sources consumption and climate change Chapters covering specific fuels and renewable sources of energy contain details on the production and consumption of individual fuels presented using commodity balances A commodity balance illustrates the flow of a fuel through from production to final consumption These individual commodity balances are also combined in an energy balance showing the interaction between different fuels General energy statistics are presented in a table revealing energy consumption by final

users and an analysis of energy consumption by main industrial groups. Surveys conducted by AEA Energy Environment on behalf of DECC estimate the contribution made by combined heat and power and renewable energy to energy production and consumption in the UK.
