Operations Research and Environmental Management Carlo Carraro, Alain Haurie, 2012-12-06 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics ranging from economics to engineering from environmental management at the industry or regional level to basic mathematical modelling research It is the combination of the activities on these last two topics that led the Fondazione to organise with the University of Geneva a work shop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management In the recent past attention has often been devoted to global environmental issues in which the level of policy making is either international through multi country agreements on emission control or national when environmental policies are designed to control domestic pollution Many environmental problems however have a local or regional dimension Even when their dimension is global e g in the case of the greenhouse gas effect relevant decisions on emission control such as the adoption of energy saving utilities are taken at the local level In many countries the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources It is therefore important to analyze the way in which local or regional authorities optimise their environmental management **Data Science of Renewable Energy Integration** Yuichi Ikeda, 2024-02-20 This book covers various data scientific approaches to analyze the issue of grid integration of renewable energy for which the grid flexibility is the key to cope with its intermittency It provides readers with the scope to view renewable energy integration as establishing a distributed energy network instead of the traditional centralized energy

system Specifically quantitative valuation system wise of the levelized cost of energy which includes both initial cost and various operational costs enables readers to optimize energy systems in order to minimize economic cost and environmental impact It is noted however that the high cost of integrating renewable energy on a large scale might slow economic growth considerably Topics addressed in the book also include statistical comparative study of the relationship between energy and economic growth a graphical model of determinant factors for foreign direct investment in renewable energy the coupled oscillator model and unit commitment model to capture intermittency of renewable energy and the network model of evolving micro grids The book explains desired innovation to reduce the integration cost significantly using innovative technologies such as energy storage with hydrogen production and vehicle to grid technology Illustrated by careful analysis of selected examples of renewable integration using different types of grid flexibility this volume is indispensable to readers who make policy recommendations to establish the distributed energy network integrated with large scale renewable energy by disentangling the nexus of energy environment and economic growth

The Power of Science Domenico Rossetti di Valdalbero, 2010 This book highlights the interaction between science and politics and between research in economics and European Union policy making It focuses on the use of Quantitative tools Top down and Bottom up models in upstream European decision making process through five EU policy case studies energy taxation climate change energy efficiency renewable energy and internalisation of external costs The author reveals how the European Commission grounds part of its legitimacy on the objectivity of the figures and on its technical charisma Faced by strong stakeholders an elected European Parliament and a

Council representing the national interests the Commission defends the credibility of its policy initiatives e.g. energy and environment targets new market mechanisms by scientific reports Through an in depth analysis of the preparatory legislation Commission White Papers Communications Directive Proposals Staff Working Documents Impact Assessments the author explains how the European Commission justifies economically and supports politically its initiatives This book offers a new way of understanding the EU decision making process with special reference to the energy and environment fields

Systems Modelling for Energy Policy Derek W. Bunn, Erik R. Larsen, 1997-07-07 Energy is a sector where there has always been a serious modelling tradition but with the worldwide trend away from planned economies to new market structures the risk uncertainties and competitive aspects which need to be incorporated pose new challenges to analyse strategic as well as economic behaviour Systems Modelling for Energy Policy addresses the strong and apparently countervailing themes dominating energy policy in the current decade concerns about global warming have stimulated an intense and methodologically diverse level of analytical activity aimed ultimately at greater international co ordination in policy and planning simultaneously we are witnessing a worldwide trend away from planned national energy policies to new market structures To accommodate these shifts in focus more comprehensive analytical procedures are needed to address technical challenges in handling large models whilst smaller policy specific behavioural models may give greater insight to the strategic challenges involved in maintaining focus on key industry restructuring issues for which past data is not available This volume provides a comprehensive and up to date reference to the range of issues and modelling alternatives that a systems perspective gives to the analysis of energy policy Practitioners analysts and researchers will find new studies and comparative modelling insights in this book which are not easily accessed elsewhere
